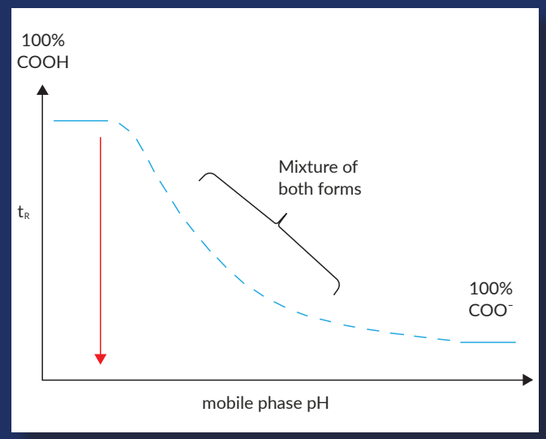
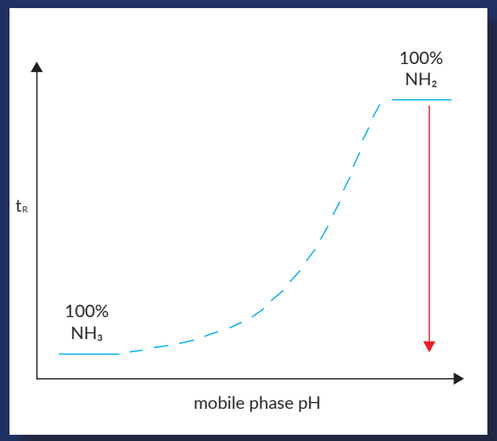
WHY IS THERE A NEED TO DO CHROMATOGRAPHY AT EXTREME pH?



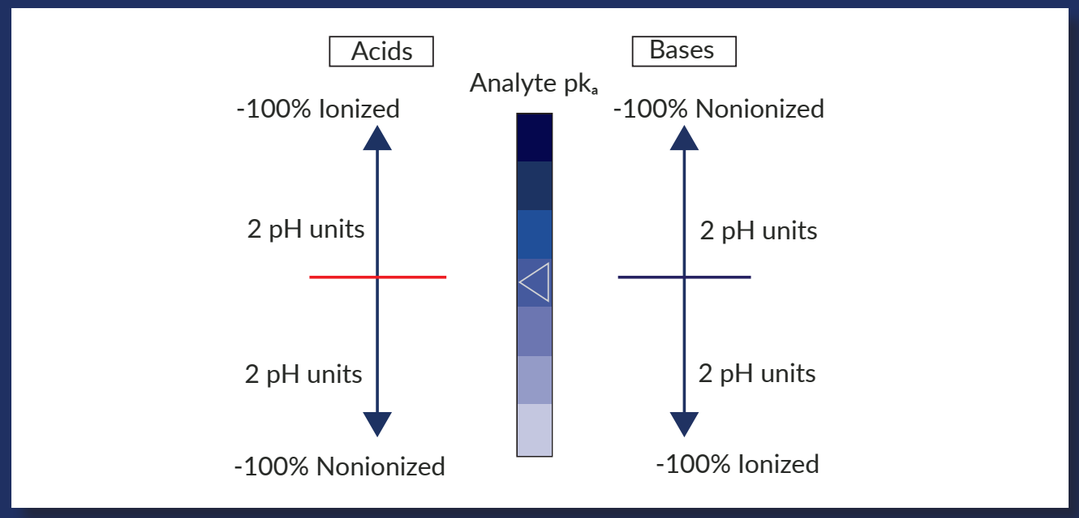


$RCOOH \leftrightharpoons RCOO^- + H^+$

Acids are best retained with optimal peak shape at low pH

$RNH_2 \leftrightharpoons RNH_3^+ + OH^-$

Bases are best retained with optimal peak shape at high pH



EFFECT OF EXTREME pH ON SILICA BASED MEDIA

High pH:

Hydrolysis of silica gel backbone

→ Severe peak distortion
→ loss of efficiency

Low pH:

Hydrolysis of bonded phase and endcapping

→ Loss of retention time
→ Peak tailing for basic compounds

INCREASING pH STABILITY
