Quality, Innovation, Competitive Price

Welch Materials is a multinational company that develops and manufactures chromatography consumables including HPLC column, Solid Phase Extraction (SPE) cartridge, GC column, Prep column, Flash cartridge and packing materials.

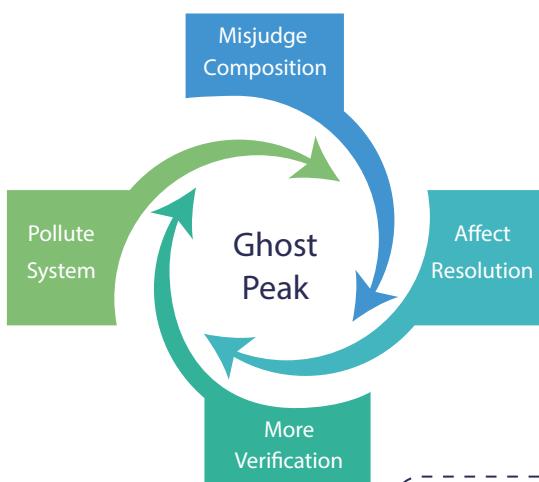

Welch Materials (Shanghai), Inc. was established in 2003 at Shanghai, China and Welch Materials (Zhejiang), Inc. was set in 2011 at Jinhua, Zhejiang, China. We also have set Welch Materials, Inc. at West Haven, CT, USA and Welch Materials India Pvt. Ltd. at Gurgaon, India. Our initial strength was our extensive experience on particle surface modification science and techniques. We are experts on bonding chemistry and innovative packing materials for chromatography applications. Through the optimal utilization of our resources, we have developed many innovative LC and GC consumable products, in particular, our six series HPLC columns, Ultisil®, Welchrom®, Xtimate®, Topsil®, Boltimate® and Blossmate®.

Ghost-Buster Column

What is Ghost Peak?

The peak appears erratically like ghost in chromatographic separation, especially during gradient elution or long-period operation.

Where is Ghost Peak from?

- Water, with impurities
- Purification System, polluted or poorly functioning
- Storage Containers, polluted or breeding bacteria
- Mobile Phase Additives, like salts, acids and alkalis
- Instrument, polluted after long-period use
- Other organic pollutants

Welch Ghost-Buster Column can effectively remove impurities with low polarity and thus prevents the interference from all kinds of ghost peaks. It is installed between gradient mixer and injector, which helps remove not only the impurities in mobile phase, but impurities in mixer and pipelines as well.

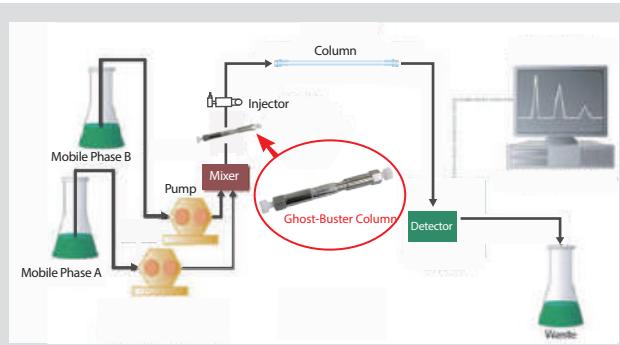

○ Operation Principles

Unlike in-line filters which removes only solid particles but not organic pollutants, Welch Ghost-Buster column provides strong adsorption to weak-polar and non-polar organic impurities, without changing the composition of mobile phase, thus to purify both mobile phase and system, remove most ghost peaks and extend lifetime of column and system.

○ Precautions

1. Install the column between Mixer and Injector. Being installed after injector would cause strong adsorption to samples and affect analysis.
2. For new analytical columns, flush Ghost-Buster column with 80% methanol solution at 1 mL/min for 20 min before new column switching to the system.
3. Not all impurities can be adsorbed by Ghost-Buster column.
4. Ion-pair solvents in mobile phase, would be adsorbed by Ghost-Buster column and affect retention and peak shape. Please use with caution under such mobile phases.
5. Column lifetime depends on analytical conditions, mobile phase and solvent purity. Routine change of Ghost-Buster column is suggested to ensure performance.
6. Ghost-Buster column is rather a purification part to the system, to filtrate impurities and protect column and system.
7. Before and after using buffer salt mobile phase, flush column with high-ratio water to transit, thus to avoid buffer salting out and blocking the column.
8. When Ghost-Buster column shows unsatisfying performance, try disconnect the outlet of the column and flush with 100% acetonitrile.

Install the Ghost-Buster column between Mixer and Injector. Sample solution must not flow through the column.

○ Application and Result

Column: Ultisil® XB-C18, 4.6×250 mm, 5 µm

Flow Rate: 1.0 mL/min

Injection Volume: 10 µL

Detection: 210 nm

Temperature: 40 °C

Sample Preparation: Ultra-pure water

Mobile Phase A: Ultra-pure water

Mobile Phase B: Acetonitrile

| Time (min) | Mobile Phase A (%) | Mobile Phase B (%) |
|------------|--------------------|--------------------|
| 0 | 90 | 10 |
| 20 | 10 | 90 |
| 30 | 10 | 90 |
| 30.1 | 90 | 10 |
| 38 | 90 | 10 |

○ Ordering Information

| Name | P/N | Dimension | Pressure |
|-------------------------|-------------|--|----------|
| Ghost-Buster Column | 06100-31000 | 4.6×50 mm | 40MPa |
| Ghost-Buster Column | 06100-31001 | 7.8×50 mm | 40MPa |
| Ghost-Buster HP Column | 06100-31021 | 2.1×33 mm | 100MPa |
| Ghost-Buster HP Column | 06100-31025 | 2.1×50 mm | 100MPa |
| Ghost-Buster Column Kit | GBKIT-01 | 4.6×50 mm, With 4 connectors and 2 pipelines | 40MPa |
| Ghost-Buster Column Kit | GBKIT-02 | 7.8×50 mm, With 4 connectors and 2 pipelines | 40MPa |

○ Q&A

Q: For different samples and gradient conditions, should the Ghost-Buster column be removed or changed?

A: Not necessary. But it needs to be removed only for special circumstances like changing of peak position or ion-pair solvents mobile phase.

Q: When gradient elution changed to isocratic, should the Ghost-Buster column be removed?

A: No need to take the Ghost-Buster column if it did not affect the separation, as the elution of mobile phase stays same under isocratic condition. But impurities in mobile phase shall be taken into consideration.

Q: In gradient system, Ghost-Buster column increases the mixed dwell volume. Will this affect the separation?

A: The packing volume of a 4.6×50mm column is ~400 µL and the column is installed before the injector, which would cause little influence on the analysis. If it does, connect Ghost-Buster column to the water phase path before the mixer or switching valve.

Q: Any requirements for the connecting of Ghost-Buster column?

A: No special requirements for the connection. Common PEEK tube and connectors for HPLC system is recommended, as metal connectors may have the possibility of being stuck at column ends.

Ghost-Buster II Column

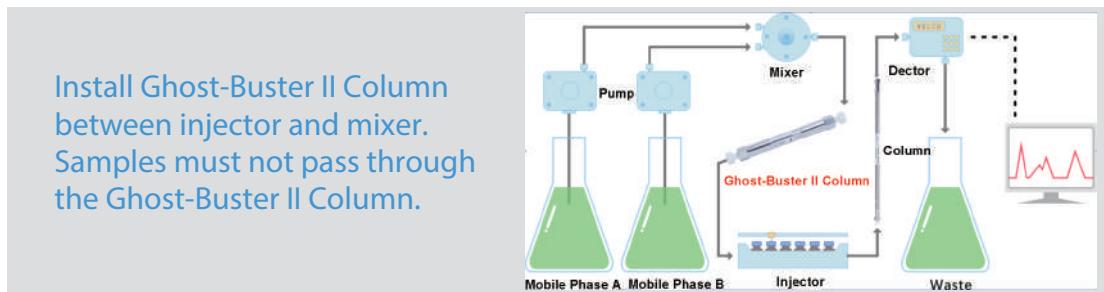

Further improvement, excellent performance!

During HPLC analysis, especially gradient elution or after long-term system usage, some unexpected peaks, often called "Ghost Peaks", may appear in the chromatogram. Welch Materials original Ghost-Buster Column can capture ghost peaks, but sometimes this has been accompanied with baseline fluctuation which may affect the integration of some peaks.

Welch Materials is delighted to announce the launch of Ghost-Buster II Column, an upgraded and improved Ghost-Buster column, which can absorb mobile phase impurities and eliminate ghost peaks. At the same time, baseline drift caused by a high proportion of aqueous solvent in the gradient program will be minimized, which ensures the stable baseline.

Precautions

1. The new Ghost-Buster II Column , should be flushed with 80% methanol at 1.0mL/min for 4-5 hours before using.
2. Not all impurities can be adsorbed by the Ghost-Buster II Column.
3. The GB II column is not compatible with 100% aqueous mobile phases. Mobile phase A should contain at least 5% organic solvent.
4. Ion-pair solvents in mobile phase would be adsorbed by Ghost-Buster II column and affect retention and peak shape. Whether this type of mobile phase can be used should be determined by testing a new GB II column with the specific method.
5. Replacement of the GB II column is recommended once the trapping effect begins to deteriorate. We do not recommend a washing or clean up procedure due to the highly retentive nature of the GB II column packing materials.

Stronger Capturing Effect

Ghost-Buster II Column uses a specifically optimized stationary phase and improved hardware. Ghost-Buster II Column removes impurities in the mobile phase with stronger retention.

Column: C18 column

GB Column: Ghost-Buster II Column, 3.0×50mm

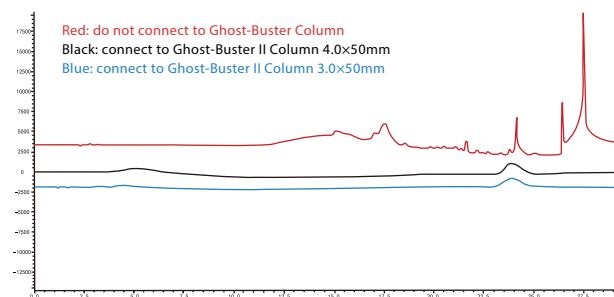

Ghost-Buster II Column, 4.0×50mm

Mobile phase: A: 0.05% phosphoric acid solution B: acetonitrile

Gradient program:

| Time/min | 0 | 3 | 15 | 20 | 20.1 | 30 |
|----------|----|----|----|----|------|----|
| A/% | 95 | 95 | 15 | 15 | 95 | 95 |
| B/% | 5 | 5 | 85 | 85 | 5 | 5 |

From the above case, it can be seen that Ghost-Buster II Column captures impurities with high retention and significantly improves baseline drift.

○ More Stable Baseline

When the initial proportion of aqueous phase is high (generally more than 95%), using conventional GB columns can remove impurities effectively. But some ghost peaks may still occur when the proportion of mobile phase has a drastic change in a few minutes or the baseline has large fluctuation. By improving the overall design of the Ghost-Buster II Column, the mobile phase is fully mixed before entering the analytical column, greatly reducing the baseline fluctuation and drift in the initial phase of the gradient program.

Column: C18 column

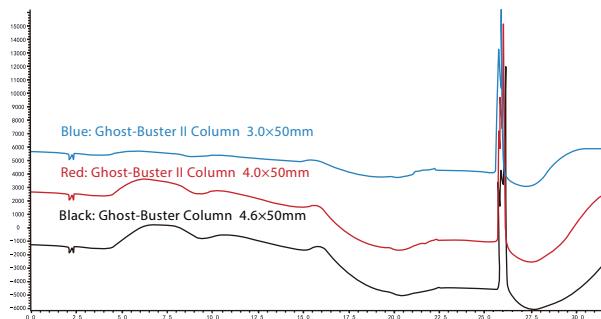

GB Column: Ghost-Buster II Column, 3.0×50mm

Mobile phase: A: phosphoric acid buffer B: acetonitrile

Gradient program:

| Time/min | 0 | 4 | 5 | 8 | 11 | 15 |
|----------|----|----|----|----|----|----|
| A/% | 96 | 89 | 89 | 84 | 80 | 50 |
| B/% | 4 | 11 | 11 | 16 | 20 | 50 |

From the above case, it can be seen that Ghost-Buster II Column, 3.0×50mm is perfectly compatible with the high proportion of aqueous phase, reducing the run time of the gradient program and providing a more stable baseline.

○ Ordering Information

| Name | P/N | Dimension | Pressure |
|-------------------------|-------------|--|----------|
| Ghost-Buster II Column | 06100-31008 | 4.0×50mm | 40MPa |
| Ghost-Buster II Column | 06100-31016 | 3.0×50mm | 40MPa |
| Ghost-Buster Column Kit | GBKIT-03 | 4.0×50 mm, With 4 connectors and 2 pipelines | 40MPa |
| Ghost-Buster Column Kit | GBKIT-04 | 3.0×50 mm, With 4 connectors and 2 pipelines | 40MPa |

○ Q&A

Q: What's the lifetime of GB column?

A: The lifetime of GB column is related to the analysis conditions, brand of the solvents and purity of the mobile phase. If the mobile phase composition (such as water/methanol) is simple, and GB column is carefully used, the lifetime of the GB column is over one year and the number of injections is around 3000 times.

Replacement of the GB column is recommended once the trapping effect begins to deteriorate.

Q: What's the washing procedure and how frequently we have to wash the column?

GB column doesn't need special washing as the adsorption of impurities is irreversible.

Q: Is GB column compatible with ion-pair reagent mobile phases?

Whether ion pair mobile phase can be used should be determined by testing a new GB column as the sorbent in the GB column will absorb ion pair reagent.

- 1) In most cases, it may not be compatible with the mobile phase which contains ion pair reagent such as sodium 1-heptanesulfonate, tetrabutylammonium hydroxide etc.
- 2) However, in some cases, GB column might not affect the retention and peak shape. In these cases, this GB column must be the dedicated column for this ion-pair reagent and can't be used for another ion-pair reagent mobile phase.

4. Can GB column be used for different types of mobile phases (such as potassium phosphate, sodium phosphate, ammonium acetate, TFA, Formic acid, etc.)?

Yes, GB column can be used for different type of mobile phase except the mobile phase containing ammonium ion. Other reagents such as potassium phosphate, sodium phosphate, TFA, formic acid, etc. can be used for the column.

5. Is GB column compatible with 100% aqueous buffers/100 % organic solvents?

- 1) GB column can't be compatible with 100% aqueous buffers. At least 5%-10% of the organic phase should be contained in the mobile phase because low percentage of organic phase (<5%) might result in the unstable baseline. In this circumstance, Ghost-Buster II column, 3.0×50mm (P/N 06100-31016) is recommended.
- 2) GB column can be used at 100 % organic solvents.

Ultisil® Series HPLC Column

Ultisil Plus series column is based on new high-purity fully porous silica and it adopts Welch's unique bonding process and end-capping technique to ensure higher inertness on the silica surface, resulting in more symmetrical peak shape, higher column efficiency, and more stable separation performance and better batch reproducibility. It has better performance especially for the analysis of multi-impurity components. The high standard and strict quality control conditions of the column ensure that each column is "survival of the fittest" after strict quality screening before leaving the factory. Ultisil Plus series columns are extremely resistant to contamination, which enables the column to have a long service life while analyzing complex matrix samples.

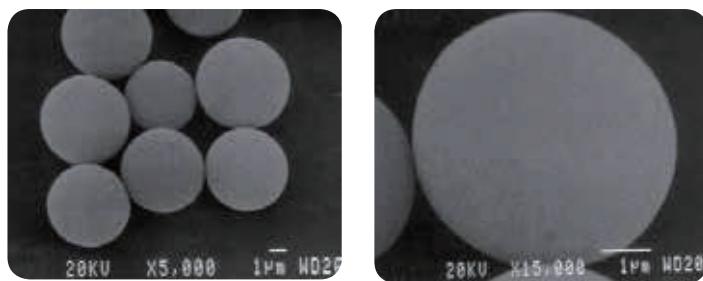

Features

- Super anti-pollution ability
- Excellent longevity
- Excellent batch-to-batch reproducibility
- The first choice for herbal medicine testing

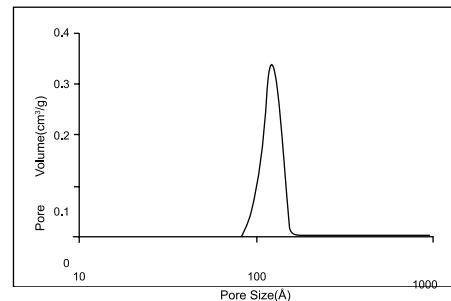

Ultisil® HPLC Column Packing Materials

Pictures below show size uniformity and surface smoothness of the packing particles, characteristics that enable more uniform packing with less channeling effect, resulting in lower back pressure and higher column efficiency.

SEM Pictures of Ultisil® Particles

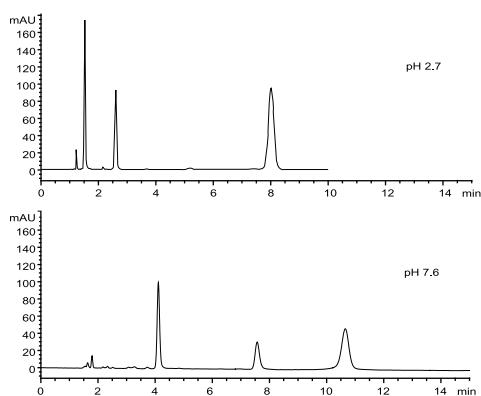

Ultisil® Pore Size Distribution

Trace Amount Metal Contents Test

A useful chromatographic test of trace amount of metal contents in the column is to compare the peak symmetry of one pair of positional isomers, 4,4'-dipyridyl and 2,2'-dipyridyl, and a neutral chelating reagent, 1,2-dihydroxylnaphthalene. 4,4'-dipyridyl, which cannot form chelating complex with metal, is used as a reference. 2,2'-dipyridyl and 1,2-dihydroxylnaphthalene, which are chelating reagents, are sensitive to trace amount metal in silica. When a C18 column based on type A silica or other so-called type B silica with higher metal content is used, the peaks of 2,2'-dipyridyl and 1,2-dihydroxylnaphthalene would tail or even totally disappear.

| Column: | Ultisil® XB-C18, 4.6 × 150 mm, 5 μm |
| Mobile Phase: | 20 mM phosphate(pH 7.6) / methanol=55/45 |
| Flow rate: | 1.0 mL/min |
| Detector: | 215 nm |
| Temperature: | 25°C |
| Injection Volume: | 1 μL |
| Samples: | 1) 4,4'-Dipyridyl 2) 2,2'-Dipyridyl 3) 1,2-Dihydroxylnaphthalene |

Ultisil® XB-C18 provides good peak shapes in the separation of these three compounds under pH 7.6, which indicates Ultisil silica contains

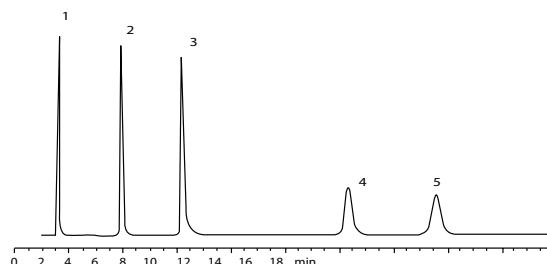

Ultisil® XB-C18—Universal HPLC Analytical Column

Ultisil® XB-C18 is the most commonly used column in the market. It can substitute Waters Symmetry C18, Agilent Zorbax XDB C18, Phenomenex Luna C18, Supelcosil LC-18-DB, YMC ODS-AM, Alltima C18, GL, Inertsil ODS-2 etc. XB-C18 has high theoretical plates and peak capacity, so it's suitable for analysis of complex samples.

Ultisil® XB-C18

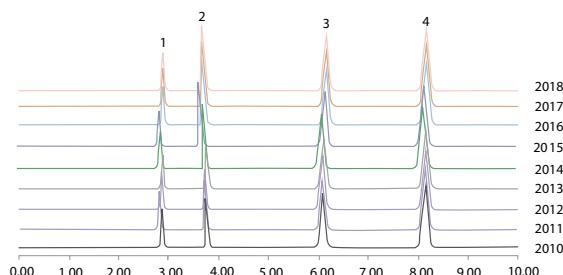

| | |
|---------------------------------|---|

300 Å pore size column provided. Please contact Welch or your local distributor for other dimensions.

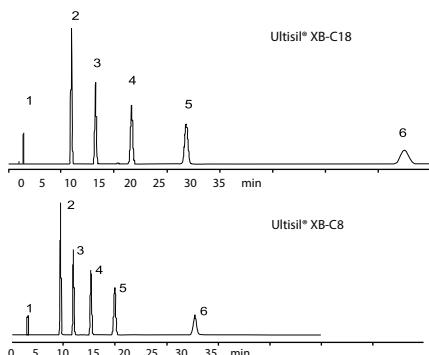

Ultisil® XB-C8--Less retentive than XB-C18

The XB-C8 phase is less retentive than XB-C18 phase, useful for strong hydrophobic compounds that are too strongly retained on C18 phase, and for LC/MS applications, where long retention is not desired. When separating neutral or other highly retained compounds, XB-C8 can save analytical time. However, when separating polar compounds, XB-C8 column provides different selectivity than does XB-C18 column.

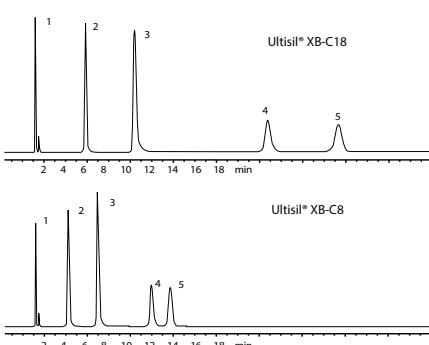

Ultisil® XB-C8

| | |
|--------------------------------------|-----------------------|
| Structural Formula | |
| pH Range | 1.5-10.0 |
| Particle Size | 3 µm, 5 µm, 10 µm |
| Surface Area(m²/g) | 320(120 Å), 90(300 Å) |
| Carbon Loading(%) | 12(120 Å), 4(300 Å) |
| USP List | L7 |
| Endcapped | Yes |

Comparison of Retention of XB-C18 and XB-C8

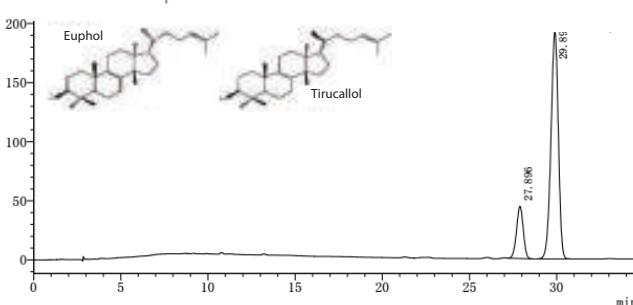

| | |
|----------------------|--|
| Column: | 4.6 ×150 mm, 5 µm |
| Mobile Phase: | Water / acetonitrile=30/70 |
| Flow rate: | 1.0 mL/min |
| Detector: | 344 nm |
| Temperature: | 25°C |
| Samples: | 1) Uracil 4) Butylbenzene 2) Ethylbenzene 5) Amylbezene 3) Propylbenzene 6) Heptylbenzene |

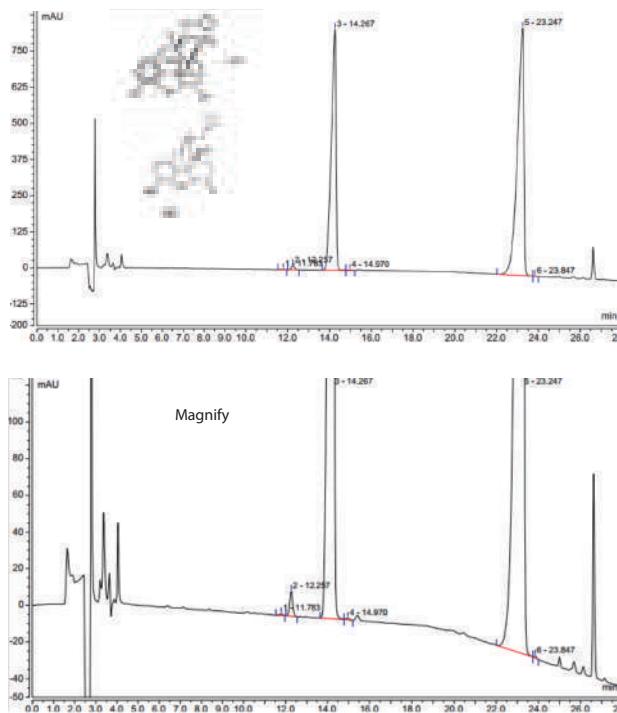

| | |
|----------------------|--|
| Column: | 4.6 ×150 mm, 5 µm |
| Mobile Phase: | 20 mM phosphate(pH 7.0) / methanol=20 / 80 |
| Flow rate: | 1.0 mL/min |
| Detector: | 215 nm |
| Temperature: | 25°C |
| Samples: | 1) Uracil 4) Amitriptyline 2) Ropranolol 5) Trimipramine 3) Ortriptyline |

mAU Tirucalol and Euphol

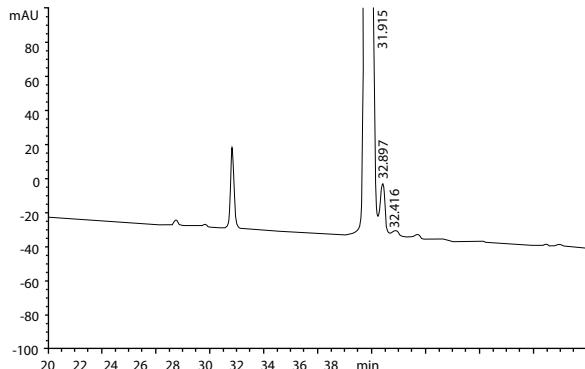

| | |
|--------------------------|-----------------------------------|
| Column: | Ultisil® XB-C8, 4.6 ×250 mm, 5 µm |

Ultisil® XB-Phenyl--Different Selectivity to Alkyl Phase

Ultisil® XB-Phenyl phase is less retentive than conventional C18 or C8 phases, but more retentive than standard cyano phase. Due to their ability to participate in π - π interactions, XB-Phenyl columns may actually be more retentive than C18 or C8 columns towards certain polar aromatic compounds, depending on running conditions. The selectivity for highly polar aromatics, which are poorly retained on alkyl-bonded phases, together with reduced retentivity towards non-polar compounds, make XB-Phenyl an excellent choice for the analysis of complex mixtures of polar and non-polar analytes. Additionally, this bonding phase boasts high surface coverage and exhaustive double end-capping, leading to better performance.

Ultisil® XB-Phenyl

Ultisil® XB-C4--suitable for separation of bio-samples

Features

- Strong retention for hydrophobic and polar compounds
- Column packing of 300Å big pore size particles is appropriate for separation of peptide and protein samples with sharp peak shape
- Minibore column can be used for LC/MS(/MS)

Ultisil® XB-CN--unique selectivity for polar compounds

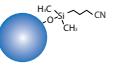

Ultisil® XB-CN column can be used in either reversed or normal phase. Reversed phase CN column has special selectivity for polar compounds, and due to its low hydrophobicity, elution of hydrophobic molecules is fast. Furthermore, XB-CN column shows perfect peak shape for strong basic analytes (including quaternary ammonium salts). Polarity of XB-CN column is the strongest among all reversed columns. It is a good choice for compounds that are strongly retained on standard reversed columns.

Normal phase CN column can replace SiO₂ column. Equilibrium of normal phase column is fast, and the silica surface activity is better than that of silica column. To prolong column life time, alternation between reversed phase and normal phase uses should be avoided. While XB-CN column can be used in either reversed or normal phase, elution sequence is different in different separation mode.

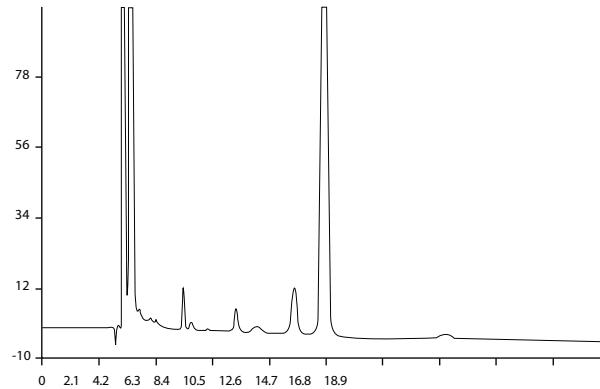

Features

- Can be used in either reversed or normal phases
- Stable bonding chemistry and excellent surface coverage
- Low hydrophobicity, unique selectivity

Ultisil® XB-CN

Ultisil® SiO₂

Ultisil SiO₂ column uses ultra-high purity type B silica particles with no metal contents. SiO₂ column can separate strong hydrophilic compounds in high concentration organic solvent in reversed phase. Good result can be obtained for the analysis of polar compounds which are prone to peak tailing in reversed phase.

Ultisil® SiO₂

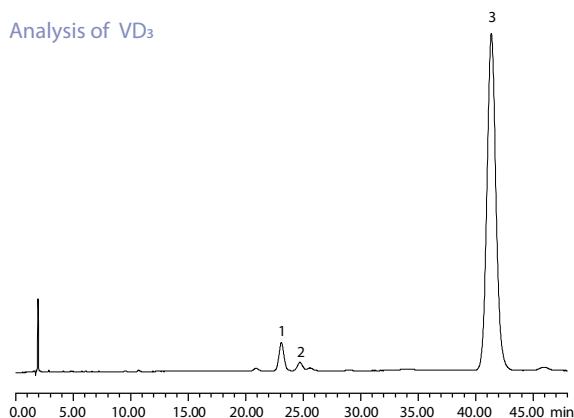

| | |
|---------------------------------|---|
| Structural Formula |  |
| pH Range | 2.0-8.0 |
| Particle Size | 3 µm, 5 µm, 10 µm |
| Surface Area(m ² /g) | 320(120 Å), 90(300Å) |
| Carbon Loading(%) | N/A |
| USP List | L3 |
| Endcapped | No |

Analysis of VD₂

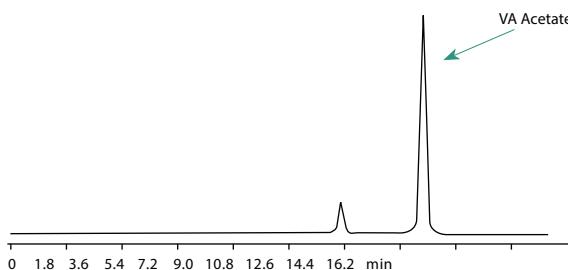

| | |
|-------------------|---|
| Column: | Ultisil® SiO ₂ , 4.6 ×250 mm, 5 µm |
| Mobile Phase: | Hexane / isopropanol = 997/3 |
| Flow Rate: | 2.0 mL/min |
| Detector: | 254 nm |
| Temperature: | 30°C |
| Injection Volume: | 1. Facade VD ₂ 2. Internal Standard 3. VD ₂ |

Analysis of VD₃

| | |
|-------------------|---|
| Column: | Ultisil® SiO ₂ , 4.6 ×250 mm, 5 µm |
| Mobile Phase: | N-hexane / n-amyl alcohol = 99.7/0.3 |
| Detector: | 254 nm |
| Temperature: | 30°C |
| Flow Rate: | 2.0 mL/min |
| Injection Volume: | 1. Facade VD ₃ 2. trans VD ₃ 3. VD ₂ |

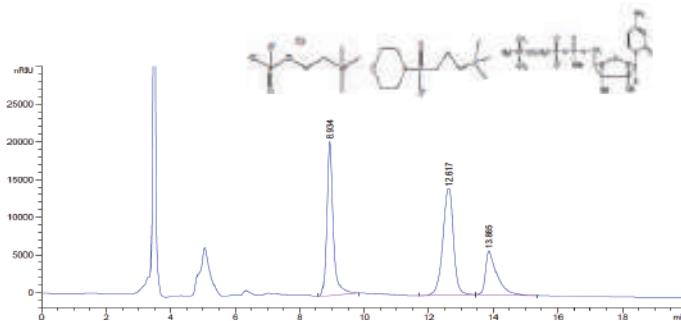

Analysis of VA Acetate

| | |
|---------------|---|
| Column: | Ultisil® SiO ₂ , 4.6 ×250 mm, 5 µm |
| Mobile Phase: | N-hexane / isopropanol = 99.8/0.2 |
| Detector: | 326 nm |
| Temperature: | 16°C |
| Flow rate: | 1.0 mL/min |

Sample is dissolved with n-hexane.

Separation of chlorophosphorylcholine, Phosphorylcholine morpholine and Citicoline Sodium

| | |
|-------------------|---|
| Column: | Ultisil® SiO ₂ , 4.6 ×250 mm, 5 µm |
| Mobile Phase: | Acetonitrile / water/ glacial acetic acid = 60/40/2 |
| Detector: | RID |
| Temperature: | 35°C |
| Flow rate: | 1.0 mL/min |
| Injection Volume: | 10 µL |

Ultisil® Diol

Ultisil® Diol Column is based on ultra-pure porous spherical silica bonded with 1,2-dihydroxypropyl functional group silica Ultisil® Diol is used in normal phase mostly, suitable for separation of peptides, proteins, polar molecules, and organic acids and its polymers.

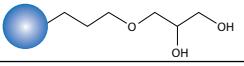

Like bare silica, Ultisil® Diol has the ability to form hydrogen bonds and is capable of separating structure isomers. Since most of its surface is covered with organic functions, Ultisil® Diol absorbs less water, which leads to more reproducible activity. It is also the sorbent of choice when working in normal phase in the presence of water. It has a different selectivity than bare silica gel, and slight modification in the composition of solvent mixture may be necessary to obtain a similar retention.

Ultisil® Diol column is more stable than traditional normal phase columns, such as NH₂, SiO₂. Compared with NH₂/SiO₂ column, Diol column is not sensitive to water. Ultisil® Diol column can also be used in reversed phase analysis.

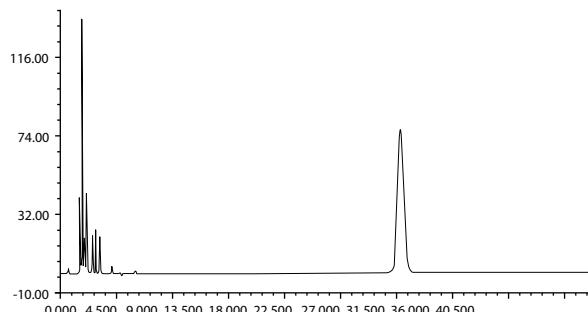

Features

- More stable than traditional normal phase columns, such as Silica, Amine
- Can be used in reversed phase analysis
- Similar polarity to Amine
- Good selectivity without excessive retention
- Improved peak shape compared to bare silica

Ultisil® XB-NH₂

Ultisil® XB-NH₂ column is based on propyl-amino silane, mostly used in normal phase, but can also be used in reversed phase.

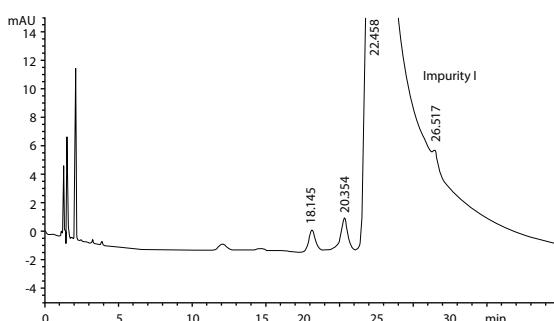

Features

- Used in normal phase for weak anion-exchange, and in reversed-phase HPLC for polar compounds
- For applications in aggressive normal phase mode with aqueous eluent
- Vitamins A and D can be separated in the normal-phase mode
- Carbohydrates and sugars can be separated in the reversed-phase mode

Ultisil® XB-NH₂

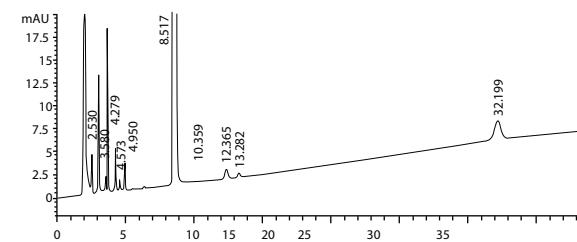

| | |
|---------------------------------|-------------------|
| Structural Formula | |
| pH Range | 2.0-8.0 |
| Particle Size | 3 μm, 5 μm, 10 μm |
| Surface Area(m ² /g) | 320(120 Å) |
| Carbon Loading(%) | 4(120 Å) |
| USP List | L8 |
| Endcapped | No |

Acarbose

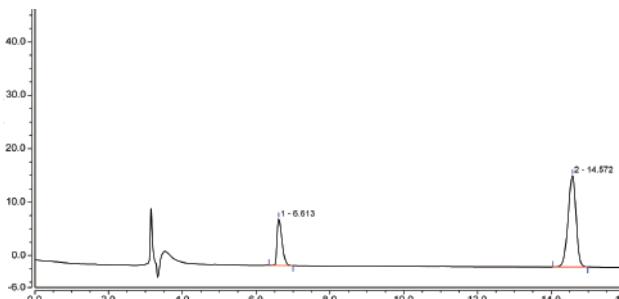

| | |
|-------------------|---|
| Column: | Ultisil® XB-NH ₂ , 4.6 ×250 mm, 5 μm |
| Mobile Phase: | Phosphate buffer */acetonitrile=28/72 * Dissolve 600 mg of s KH ₂ PO ₄ and 279 mg of ADSP in 100 mL water, add water to make 1000 mL |
| Detector: | 210 nm |
| Temperature: | 35°C |
| Flow Rate: | 2.0 mL/min |
| Injection Volume: | 10 μL |

Acetyl-L-carnitine

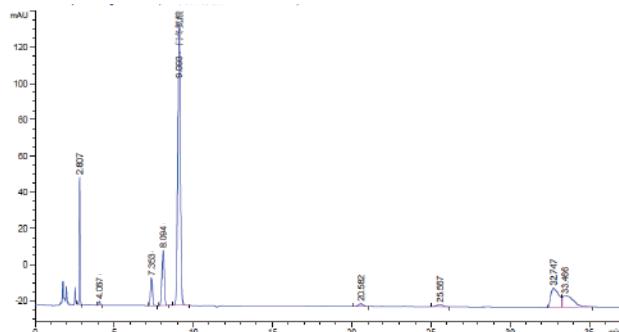

| | |
|-------------------|--|
| Column: | Ultisil® XB-NH ₂ , 4.6 ×250 mm, 5μm |
| Mobile Phase: | Buffer/acetonitrile=30/70 |
| Detector: | 205 nm, 210 nm |
| Temperature: | 20°C |
| Flow Rate: | 1.0 mL/min |
| Injection Volume: | 10 μL |

Separation of N-tert-butylglycine hydrochloride and N-tert-butylglycine acid chloride hydrochloride

| | |
|-------------------|---|
| Column: | Ultisil® XB-NH ₂ , 4.6 ×250 mm, 5 μm |
| Mobile Phase: | Methanol/isopropanol=80/20 |
| Detector: | 210 nm |
| Temperature: | 30°C |
| Flow Rate: | 1.0 mL/min |
| Injection Volume: | 5 μL |

Ornithine Aspartate

| | |
|-------------------|---|
| Column: | Ultisil® XB-NH ₂ , 4.6 ×250 mm, 5μm |
| Mobile Phase: | KH ₂ PO ₄ buffer solution*/acetonitrile=40/60 * Dissolve 2.72 g of KH ₂ PO ₄ in 500 mL water, add 5 mL of concentrated ammonia solution, add water to 1000 mL, adjust pH 5.60±0.05 with H ₃ PO ₄ |
| Detector: | 205 nm |
| Temperature: | 30°C |
| Flow Rate: | 1.0 mL/min |
| Injection Volume: | 20 μL |

Ultisil® Ion Exchange Column (XB-SAX & XB-SCX)

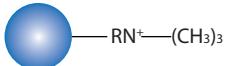

Ultisil® ion exchange columns are available for both Strong Anion Exchange (SAX) and Strong Cation Exchange (SCX) columns. The SCX/SAX columns are silica based with high resolution and high efficiency.

Ultisil® SAX is a polar bonded phase, consisting of an ammonium-functionalized silane, while Ultisil® SCX is a classical strong cation

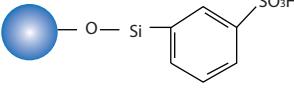

Features

- Organic modifiers such as acetonitrile and methanol may be used with SAX and SCX columns, within organic/buffer solubility constraints
- Retention can be controlled by varying pH, ionic strength and organic modifier content.

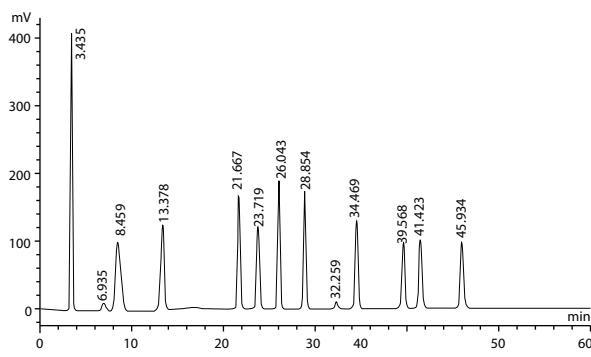

Ultisil® XB-SAX

| | |
|---------------------------------|---|
| Structural Formula |  |
| pH Range | 2.0-8.0 |
| Particle Size | 3 µm, 5 µm, 10 µm |
| Surface Area(m ² /g) | 320(120 Å), 90(300 Å) |
| Carbon Loading(%) | 7.5(120 Å), 1.5(300 Å) |
| USP List | L14 |
| Endcapped | No |

Ultisil® XB-SCX

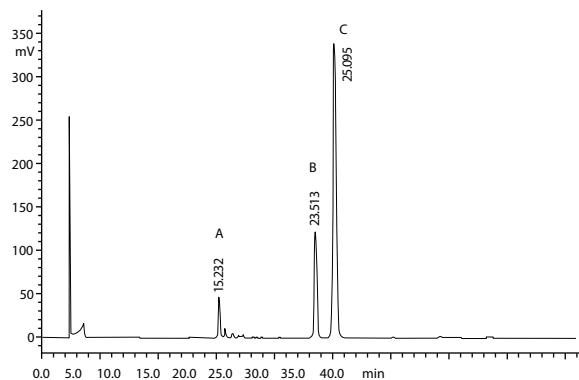

| | |
|---------------------------------|---|
| Structural Formula |  |
| pH Range | 2.0-8.0 |
| Particle Size | 3 µm, 5 µm, 10 µm |
| Surface Area(m ² /g) | 320(120 Å), 90(300 Å) |
| Carbon Loading(%) | 12(120 Å), 5(300 Å) |
| USP List | L9 |
| Endcapped | No |

13 Heparin Disaccharides

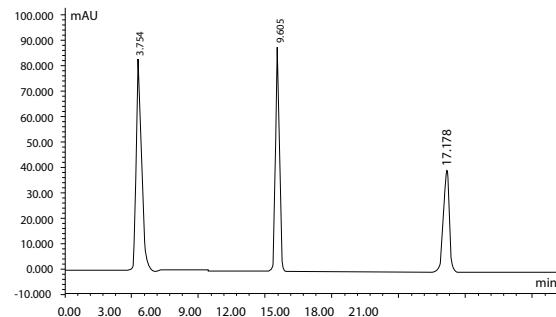

| | |
|-------------------|--|
| Column: | Ultisil® XB-SAX, 3.0 ×250 mm, 5 µm |
| Mobile Phase: | A: weight 0.308 g NaH ₂ PO ₄ to 1000 mL volumetric flask, add 950 mL water to dissolve it, adjust pH 2.9 with H ₃ PO ₄ , then add water to scale mark B: weight 122 g NaClO ₄ to 1000 mL volumetric flask, add 950 mL mobile phase A to dissolve, adjust pH 3.0 with H ₃ PO ₄ , then add mobile phase A to scale mark. |
| Detector: | 234 nm, 202 nm |
| Temperature: | 50°C |
| Flow Rate: | 0.45 ml/min |
| Injection Volume: | 10 µL |

Chondroitin Sulfate

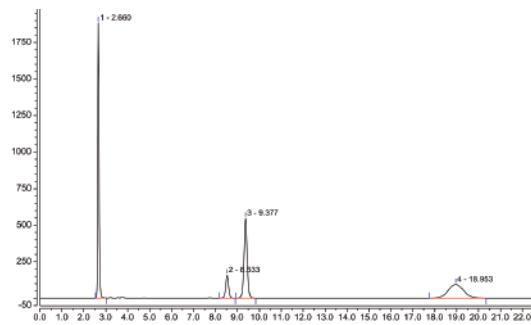

| | |
|-------------------|---|
| Column: | Ultisil® XB-SAX, 4.6 ×250 mm, 5 µm |
| Mobile Phase: | A: water, adjust pH 3.5 with diluted HCl B: 2 mol/L NaCl, adjust pH 3.5 with diluted HCl |
| Detector: | 232 nm |
| Temperature: | Ambient |
| Flow Rate: | 1.0 mL/min |
| Injection Volume: | 20 µL |
| Mixed Standards: | Chondroitin disaccharide(B) 6-sulfated chondroitin disaccharide(C) 4-sulfated chondroitin disaccharide(A) |

Metformin HCL

| | |
|-------------------|---|
| Column: | Ultisil® XB-SCX, 4.6 ×250 mm, 5 µm |
| Mobile Phase: | 1.7% NH ₄ H ₂ PO ₄ (pH 3.0 adjusted by H ₃ PO ₄) |
| Detector: | 218nm |
| Temperature: | Ambient |
| Flow Rate: | 1.0 mL/min |
| Injection Volume: | 10 µL |
| Samples In Order: | Icyandiamide, melamine, metformin HCL |

Orazamide

| | |
|-------------------|---|
| Column: | Ultisil® XB-SCX, 4.6 ×250 mm, 5 µm |
| Mobile Phase: | 1.0% NH ₄ H ₂ PO ₄ (pH 3.0 adjusted by H ₃ PO ₄) |
| Detector: | 215 nm |
| Temperature: | 30 °C |
| Flow Rate: | 1.0 mL/min |
| Injection Volume: | 10 µL |
| Samples In Order: | Orotic acid, Pyridinepropanimidamide, 4-Amino-5-imidazolecarboxamide hydrochloride and AZO |

Ultisil® XB-C30

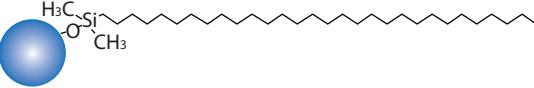

Carotenoids is a broad class of natural products, of which over 600 types have been found so far, including compounds of different carbon chain length, such as C40, C50 and C30 etc. They are well known to have many biological functions, including cancer prevention and treatment functions.

Compared to classical C18 stationary phases, the C30 phase is much more hydrophobic and retaining. Even when pure organic eluent is applied, many sample solutes, such as carotenoids, are able to retain. Ultisil® C30 is designed for the separation of geometric isomers,

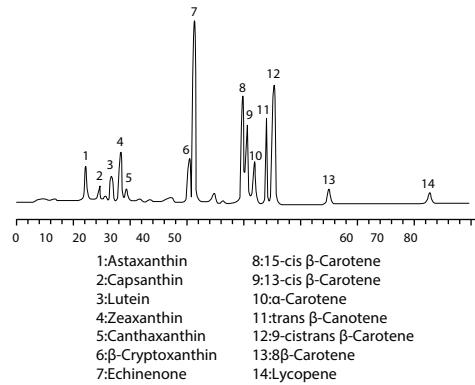

Features

- Polymeric C30 alkyl chains
- Very lipophilic
- Exceptional selectivity pattern for geometric isomers

Ultisil® XB-C30

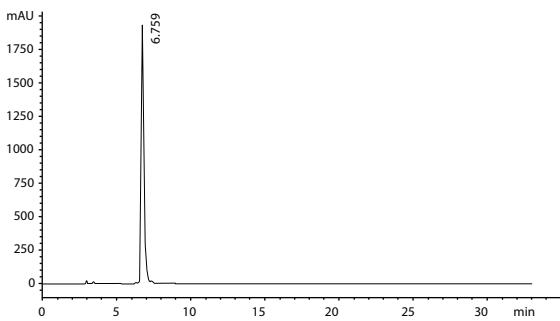

| Structural Formula |  |

Ultisil® AQ-C18

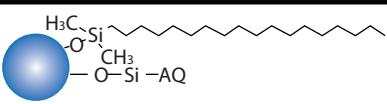

--The most widely used column in food industry

Ultisil® AQ-C18 columns are designed to have extended retention and selectivity for hydrophilic and polar compounds, which are poorly or not at all retained on other phases. A proprietary bonding chemistry, Ultisil® AQ-C18 avoids so-called "phase collapse", even when 100% water is used, a phenomenon that conventional C18 columns typically exhibit at high water content in the mobile phase. Ultisil® AQ-C18 phase is fully end-capped to ensure the best peak shapes of polar and basic compounds and longer lifetime. Typical applications are separations of water soluble compounds that cannot be retained on traditional C18 phase. Examples include biomolecules, metabolites, and pharmaceutical degradants such as organic acids, water-soluble vitamins, oligosaccharides, amino acids,

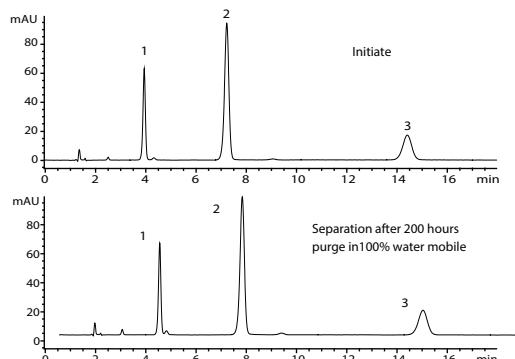

Features

- No phase collapse, suitable for high aqueous mobile phase
- Less retentive than XB-C18 for non-polar compounds
- Increased retention for polar and water-soluble compounds

Ultisil® AQ-C18

| Structural Formula |  |
|---------------------------------|---|
| pH Range | 1.5-10.0 |
| Particle Size | 3 μm, 5 μm, 10 μm |
| Surface Area(m ² /g) | 320(120 Å) |
| Carbon Loading(%) | 12(120 Å) |
| USP List | L1/L96 |
| Endcapped | Yes |

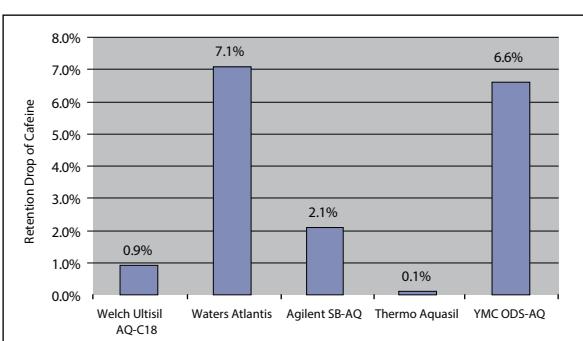

Phase collapse research

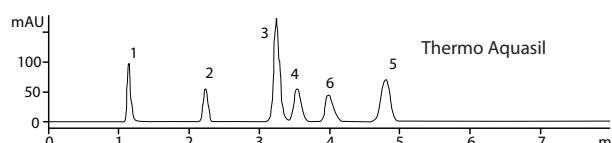

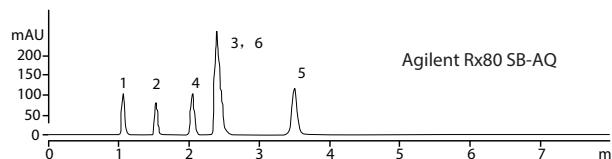

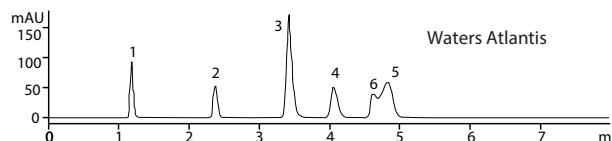

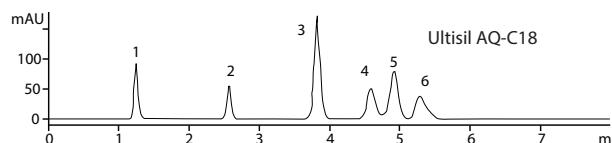

| | |
|---------------|--|
| Column: | Ultisil® AQ-C18, 4.6 × 100 mm, 5 μm |
| Mobile Phase: | Acetonitrile/50 mM phosphate(pH 3.5)=10/90 |
| Detector: | 215nm |
| Temperature: | 25°C |
| Flow Rate: | 1.0 mL/min |
| Samples: | 1.Theophylline 2.Caffeine 3.Phenol |

Phase Collapse Comparison with Other Brands

Peak shape is excellent for acid, basic and neutral samples on AQ-C18. When in highly aqueous mobile phase, retention for polar compounds such as organic acids, peptides, nucleosides and water soluble vitamins is strong. Under the same condition, when compared with other brands in highly aqueous mobile phase, Ultisil® AQ-C18 shows excellent resistance to phase collapse.

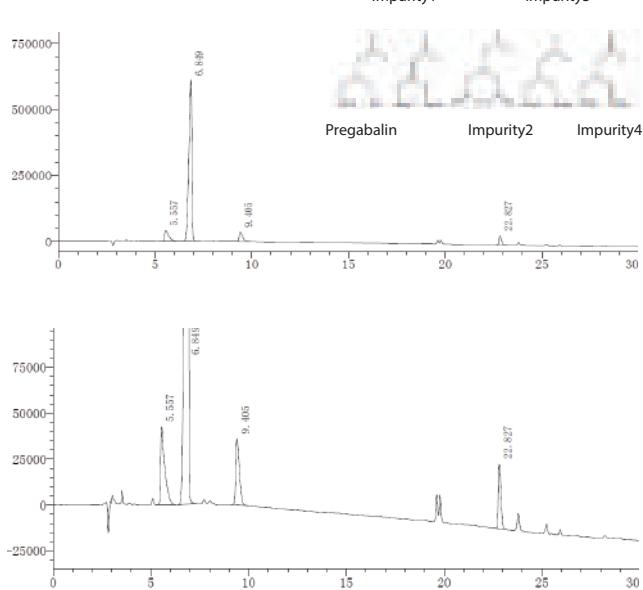

| | |
|---------------|---|
| Column: | Ultisil® AQ-C18, 4.6 × 100 mm, 5 µm |
| Mobile Phase: | 50 mM phosphate, pH2.5 |
| Detector: | 210 nm |
| Temperature: | 25°C |
| Flow Rate: | 1.0 mL/min |
| Samples: | 1. Oxalic acid 2. Lactic acid 3. Maleic acid 4. Citric acid 5. Fumaric acid 6. Succinic acid |

How to choose XB-C18 and AQ-C18?

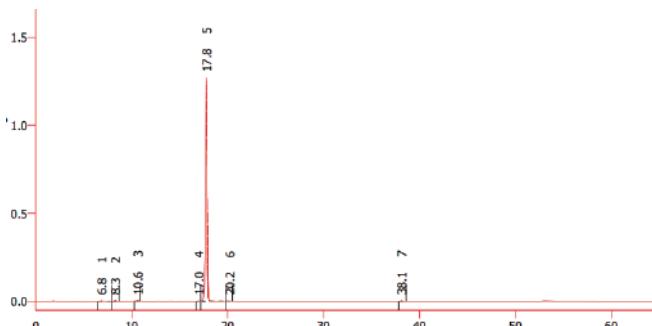

| XB-C18 | AQ-C18 |
|---|---|
| <ul style="list-style-type: none"> Suitable for separation of most pharmaceuticals, environment and chemical compounds Excellent peak shape for basic and polar samples | <ul style="list-style-type: none"> Suitable for water soluble strong polar samples, such as traditional Chinese medicine ingredients, food, beverage, organic acids, peptides, nucleosides and water solution vitamins Best choice for mobile phase that contains <20% organic content |

Ultisil® LP Series HPLC Column

LP is abbreviation for Low pH. LP phases are designed for use at low pH conditions. LP phase consists of two very bulky hydrophobic protective groups to prevent siloxane bond from hydrolysis at low pH condition. So Ultisil® LP column is extremely stable in very low pH mobile phase and at high temperature, even at the lowest pH of 1.0, making it the most stable phase for low pH application in the market. Because it is not endcapped and has more surface silanols, LP phase has more retention for some early eluted polar compounds, and provides different selectivities . Ultisil® LP-C18 is the most polar C18 among all the C18 products of Welch.

Features

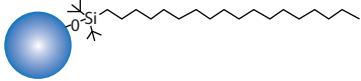

- Not endcapped, prevents siloxane bond from hydrolysis at low pH condition.
- Compatible with 100% water as the mobile phase, more polar than "AQ", better peak shape and resolution
- Best peak shape for polar compounds
- Exceptional lifetime at low pH (0.5-8.0) and high temperature

How to choose XB-C18 and LP-C18

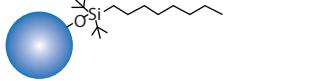

When pH<5.0, based on your separation conditions, you may choose either LP-C18 or XB-C18;

When pH<2.0 (such as 0.1%TFA), LP-C18, which provides exceptional stability, longer lifetime, perfect peak shape and superior selectivity, is your best choice

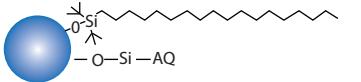

Ultisil® LP-C18

| Structural Formula |  |
|---------------------------------|--|
| pH Range | 0.5-8.0 |
| Particle Size | 3 µm, 5 µm, 10 µm |
| Surface Area(m ² /g) | 320(120 Å), 90(300 Å) |
| Carbon Loading(%) | 10(120 Å), 5(300 Å) |
| USP List | L1 |

300 Å HPLC column provided. Please contact Welch or your local distributor for other dimensions.

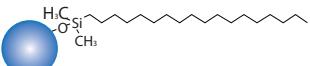

Ultisil® Plus Series HPLC Column

Ultisil Plus series column is based on new high-purity fully porous silica and it adopts Welch's unique bonding process and end-capping technique to ensure higher inertness on the silica surface, resulting in more symmetrical peak shape, higher column efficiency, and more stable separation performance and better batch reproducibility. It has better performance especially for the analysis of multi-impurity components. The high standard and strict quality control conditions of the column ensure that each column is "survival of the fittest" after strict quality screening before leaving the factory. Ultisil Plus series columns are extremely resistant to contamination, which enables the column to have a long service life while analyzing complex matrix samples.

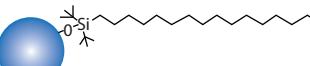

Features

- Super anti-pollution ability
- Excellent longevity
- Excellent batch-to-batch reproducibility
- The first choice for herbal medicine testing

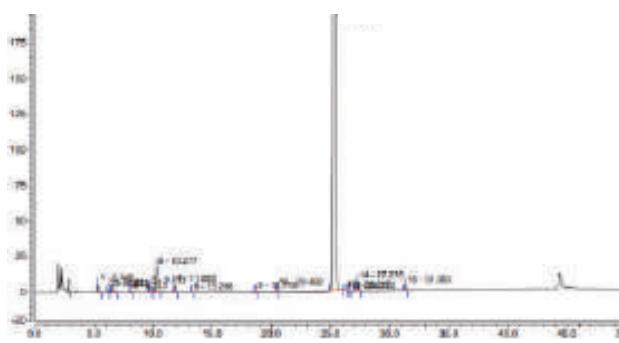

Ultisil® Plus C18

Ultisil® ALK-C18

Ultisil® ALK-C18 is a new generation of C18 column introduced by Welch. In this column, hydrophilic groups are bonded into the silica surface, where large number of silanol groups are replaced, reducing the interactions between basic samples and the silanol groups. As a consequence, the selectivity of ALK-C18 is different from that of traditional C18.

Features:

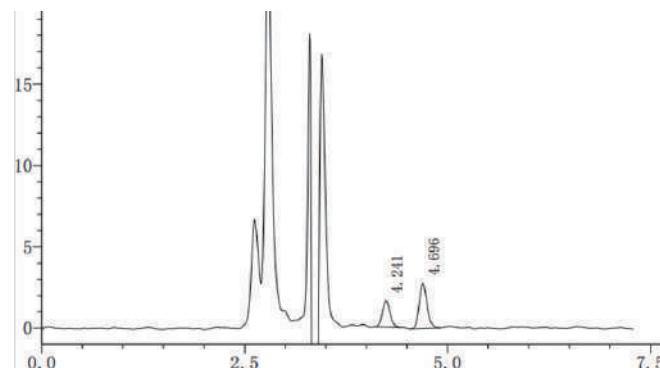

- Mixed solid phase with both hydrophobic and electrostatic interactions
- Excellent peak shape for basic compounds
- Fast separation of similar samples on a column

Ultisil® ALK-C18

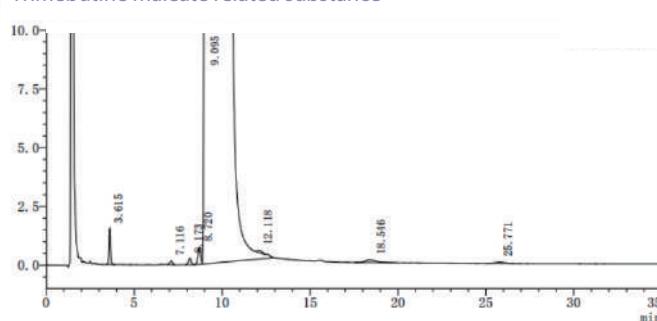

| Structural Formula |  |
|---------------------------------|---|
| pH Range | 1.5-10.0 |
| Particle Size | 5 µm |
| Surface Area(m ² /g) | 320(120 Å) |
| Carbon Loading(%) | 12(120 Å) |
| USP List | L1 |
| Endcapped | Yes |

Ultisil® ODS-3

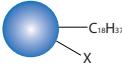

-- High Water-resistance Octadecyl HPLC Column

Ultisil® ODS-3 column is packed with high water-resistance octadecyl reversed-phase packing material. The hydrophilic end group of the octadecyl functional group is strictly endcapped, which brings perfect peaks and low adsorption for both alkaline and acid compounds. The 100% water-resistance packing material avoids the collapse of stationary phase and applies to the separation and determination of most compounds.

Features:

- 100% water resistance
- High efficiency and resolution
- High sample loading
- Easy preparative magnifying
- Different selectivity from common C18

Ultisil® ODS-3

| Structural Formula |  |
|---------------------------------|---|
| pH Range | 2.0-8.0 |
| Particle Size | 3 μm, 5 μm |
| Surface Area(m ² /g) | 380(100 Å) |
| Carbon Loading(%) | 15(100 Å) |
| USP List | L1 |
| Endcapped | Yes |

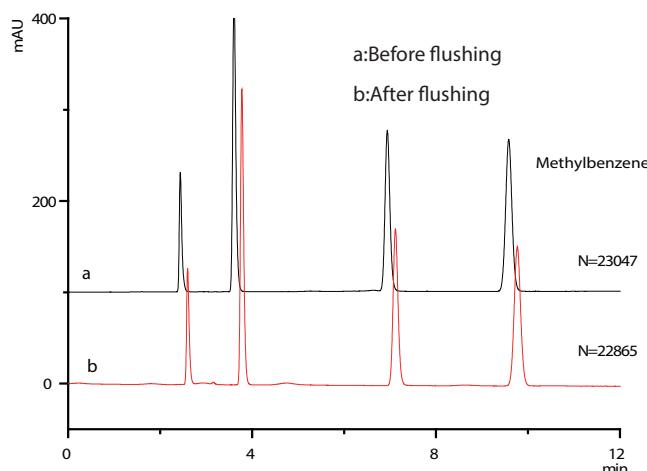

Tests of 48-hour Pure Water Resistance

Mobile Phase: 20 mM K₂HPO₄, adjust pH 7.0 with phosphate

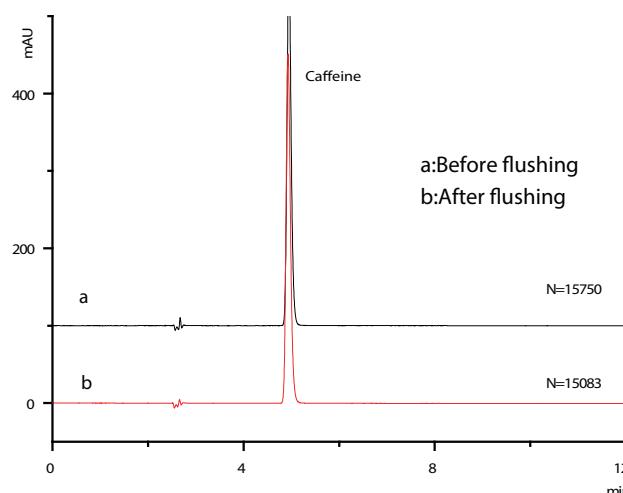

Temperature: 30°C

Flow Rate: 1.0 mL/min

Operation: Flush the column with mobile phase for 24 h. Then test the column efficiency and tailing factor. Control the pressure and change the mobile phase every 24 h.

Ultisil® XS-C18

Ultisil® XS-C18 is developed with high column efficiency, high loading and high capacity. It has excellent steric hindrance selectivity, especially shape selectivity.

There are two patterns of Steric Hindrance: Steric Exclusion and Shape Selectivity. Ultisil® XS-C18 uses unique multi-bonding technique, with high bonding density and short distance between ligands, providing better shape selectivity.

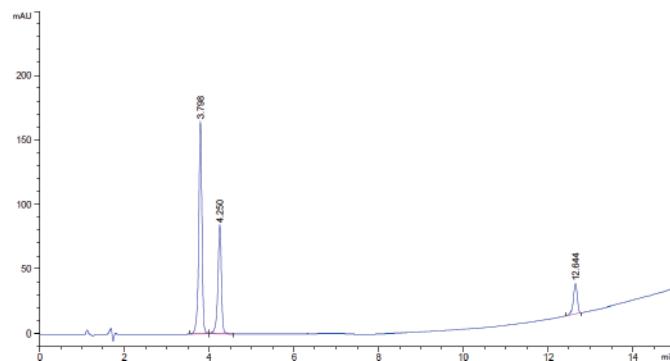

Minimum cross- Section of Solute

Compound i has more narrow size, with smaller cross-sectional area, which allows it go into the ligands and provides better retention. Compound j has wider size, with bigger cross-sectional area, which makes it rejected out by stationary phase, providing shorter retention time. Thus are two compounds separated. Normal bonded columns have bigger interstices between ligands, which allows both compounds through and results in poor resolution.

Ultisil® PAH

Ultisil® PAH Column is a special column recently designed by Welch for the separation of PAHs in EPA method 610.

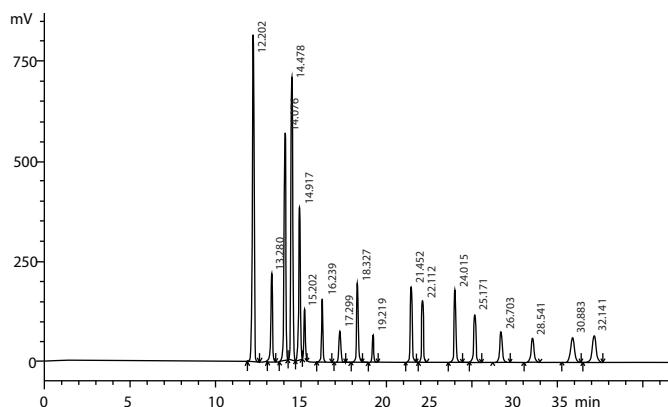

PAHs (Polycyclic Aromatic Hydrocarbon) are hydrocarbons with two or more benzene rings, and considered major pollutants. Therefore, the analysis of these potentially carcinogenic compounds in water, air, soil and food takes high priority. Most of PAHs do not exist alone. Substances that may contain PAHs include charcoal, crude oil, creosote, tar, drugs, dyes, plastic, rubber, pesticide, lube, release agent, electrolyte, mineral oil, pitch, insecticide, and bactericide, etc.

Ultisil® PAH

| | |
|---------------------------------|---|
| Structural Formula |  |
| pH Range | 1.5-10.0 |
| Particle Size | 3 µm, 5 µm |
| Surface Area(m ² /g) | 320(120 Å) |
| Carbon Loading(%) | 22(120 Å) |
| USP List | L1/L118 |
| Endcapped | No |

Ultisil® PAH columns can separate all 18 PAHS in EPA method 610 rapidly with high resolution. Ultisil® PAH columns are silica based columns for PAH analysis with the best peak shape.

Ultisil® Polar Embedded HPLC Column (polar-RP&Phenyl-Ether)

Ultisil® polar embedded phases have been developed for more than 10 years. Earlier polar embedded phase is developed with amide phase. The polar functional group close to the surface increases the wet ability of this phase, thus decreasing phase collapse, making this phase compatible with mobile phase of up to 95% water content. The polar functional group also shields the effects of unreacted silanol groups, providing excellent peak shape for very polar and strong basic compounds and different selectivity than C18 phase. Welch provides two kinds of packing materials - Ultisil® Polar-RP and Ultisil® Phenyl-Ether.

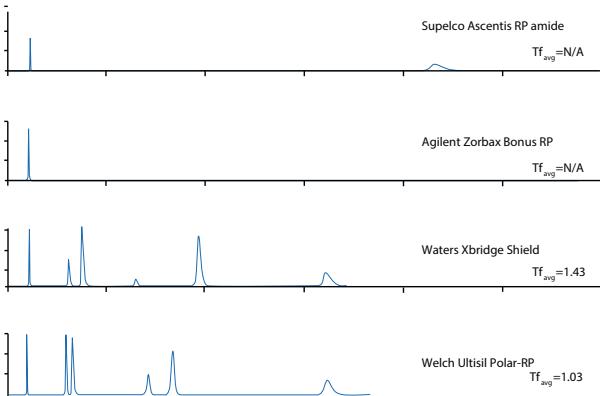

Ultisil® Polar-RP

| Structural Formula | |
|---------------------------------|-------------------|
| pH Range | 1.5-10.0 |
| Particle Size | 3 μm, 5 μm, 10 μm |
| Surface Area(m ² /g) | 320(120 Å) |
| Carbon Loading(%) | 18(120 Å) |
| USP List | L1 |
| Endcapped | Yes |

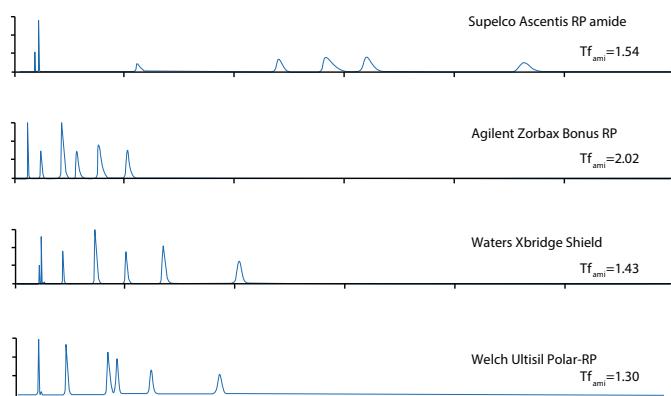

Ultisil® Polar-RP HPLC Column

- Excellent at 100% water content in mobile phase, even better than AQ-C18
- Different selectivity to AQ-C18
- Excellent peak shape for acidic and basic compounds owing to the "shield" effect of polar linkage to silanol activity by forming hydrogen bonding
- Be retentive for polar compounds. Uracil, which can't be retained on most reversed phase columns at 100% water, can be retained on this column, and eluted after 5-fluorocytosine and cytosine. Analysis of purine, pyrimidine, small molecular acids, catecholamine and water soluble vitamins, requires high water phase content mobile phase

Ultisil® Phenyl-Ether HPLC Column

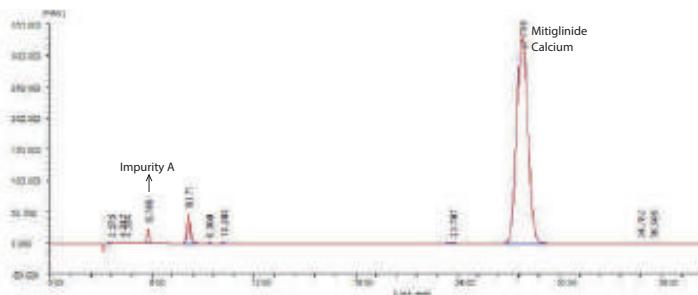

- Improved polar & aromatic reversed phases selectivity that complements the more conventional C18 column chemistries
- Better selectivity than phenyl phase for separation of nitrobenzene isomers
- Improved peak shape of highly acidic polar compounds, and different selectivity from other polar phases such as polar embedded phase
- Compatible with 100% water mobile phase

Ultisil® Fluorinated Phase(PFP & F-C8)

Ultisil® Fluorinated Phase has high selectivity and increased retention toward closely related compounds, including both aromatic fluorinated compounds and other nonaromatic halogenated compounds. It can be used in reversed phase and provides an alternative and complementary separation to that performed on C8 or C18 columns for many analytes. Fluorinated phase has better separation for ionic and polar compounds than do alkyl phases. Fluorinated phase can provide different elution orders, leading to enhanced selectivity for compounds that are difficult to separate.

Ultisil® PFP

| Structural Formula | |
|---------------------------------|------------|
| pH Range | 1.5-10.0 |
| Particle Size | 3 µm, 5 µm |
| Surface Area(m ² /g) | 320(120 Å) |
| Carbon Loading(%) | 12(120 Å) |
| USP List | L43 |
| Endcapped | Yes |

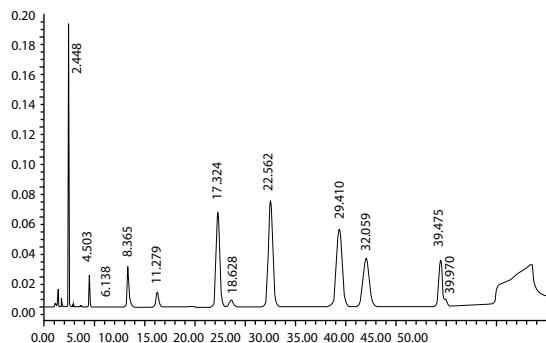

Ultisil® F-C8

| Structural Formula | |
|---------------------------------|------------|
| pH Range | 1.5-10.0 |
| Particle Size | 3 µm, 5 µm |
| Surface Area(m ² /g) | 320(120 Å) |
| Carbon Loading(%) | 12(120 Å) |
| USP List | L7 |
| Endcapped | Yes |

Ultisil® PFP

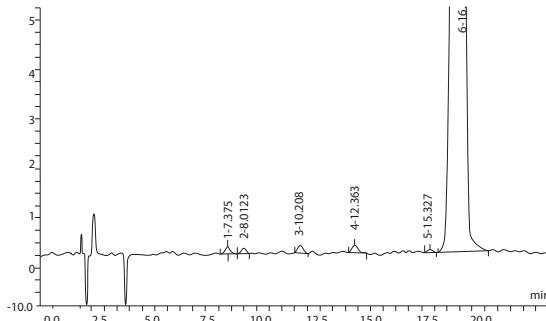

Ultisil® PF-Phenyl is a phase primarily used in the separation of molecules bearing fluorine atoms, but may also be in the separation of non-fluorinated compounds such as Taxol and its derivatives. Because of its phenyl ring, it has a higher selectivity for aromatic molecules than for other alkyl-fluorinated phases. Ultisil® PF-Phenyl can separate nitro-benzene isomers (para vs. ortho), which cannot be separated by conventional phenyl phase.

Ultisil® HILIC Amide

Ultisil® HILIC Amide column is a special column designed for HILIC mode. As amide group has strong hydrophilicity, stability and electrically neutral, Ultisil® Amide has longer life, better separation repeatability and peak shape than NH₂ phase does.

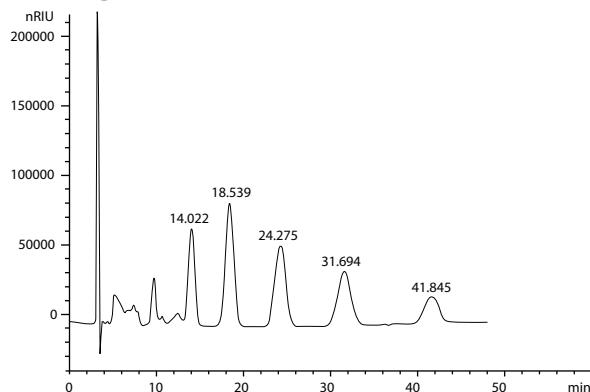

Features

- Based on silica bonded with amide groups, appropriate for the separation of hydrophilic samples
- Multiple actions such as hydrogen bond, molecular and electrostatic interactions
- Good compatibility with many kinds of detectors, such as MS detector
- Stable in organic mobile phase that contains water

Ultisil® HILIC Amide

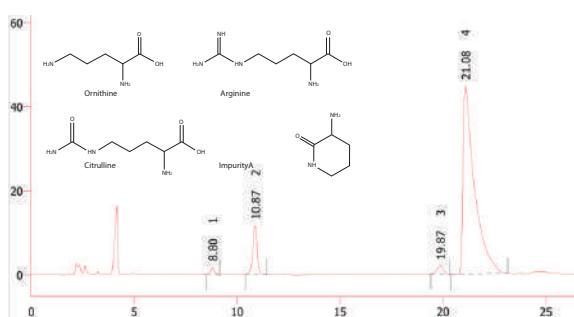

| | | | |
|---------------------------------|-------------------|-------------------|----------|
| pH Range | 2.0-8.0 | Carbon Loading(%) | 7(120 Å) |
| Particle Size | 3 μm, 5 μm, 10 μm | USP List | L68 |
| Surface Area(m ² /g) | 320(120 Å) | Endcapped | N/A |

Fructo-oligose

| | |
|-------------------|---|
| Column: | Ultisil® HILIC Amide, 4.6 × 250 mm, 5 μm |
| Mobile Phase: | Acetonitrile/water =70/30 |
| Detector: | RID (40°C) |
| Temperature: | 40°C |
| Flow Rate: | 1.0mL/min |
| Injection Volume: | 20μL |
| Mixed Standards: | Sucrose, ketose, nystose, megazyme, 1F-Fructofuranosyl nystose) |

Ornithine hydrochloride

| | |
|-------------------|--|
| Column: | Ultisil® HILIC Amide, 4.6 × 250 mm, 5 μm |
| Mobile Phase: | 20 mmol/L KH ₂ PO ₄ (pH5.6) /acetonitrile =38/62 |
| Detector: | 205 nm |
| Temperature: | 30°C |
| Flow Rate: | 1.0mL/min |
| Injection Volume: | 20μL |
| Samples in order: | 1. Citrulline 2. Impurity A 3. Arginine 4. Ornithine |

Ultisil® HILIC Amphion II

Ultisil® HILIC Amphion II is a newly developed HILIC column, using amphion-bonded silica as packing material. It applies to the separation of most polar compounds, using acetonitrile or Water other than ion-pairing reagents as mobile phase. The Amphion, containing both Positive Charge Centre and Negative Charge Centre, brings high retention for acid and alkaline compounds through ion-exchange mechanism. Compared with common HILIC packing materials like silica and amino groups, the Amphion-bonded packing material provides better reproducibility and stability.

Features

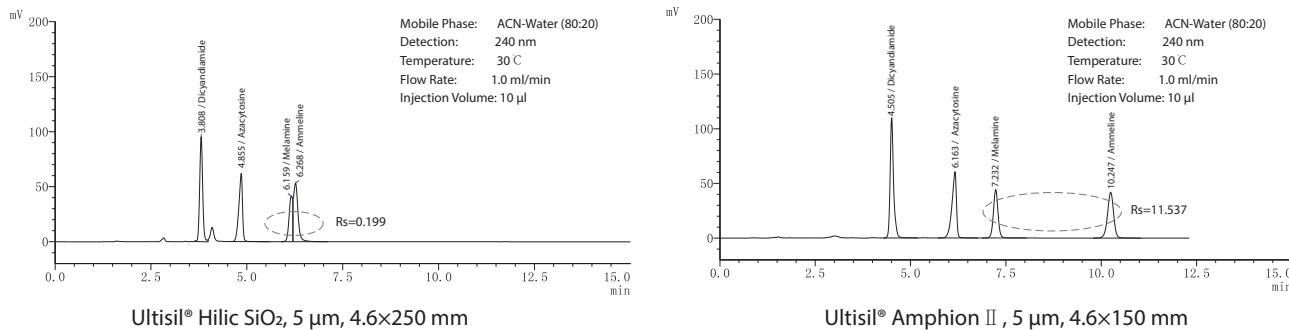

- Amphion-bonded silica stationary phase
- Enhanced hydrophilic interaction brings higher retention for polar and hydrophilic compounds
- Different selectivity from common HILIC packing materials
- Simple mobile phase used for the separation of polar compounds

Ultisil® HILIC Amphion

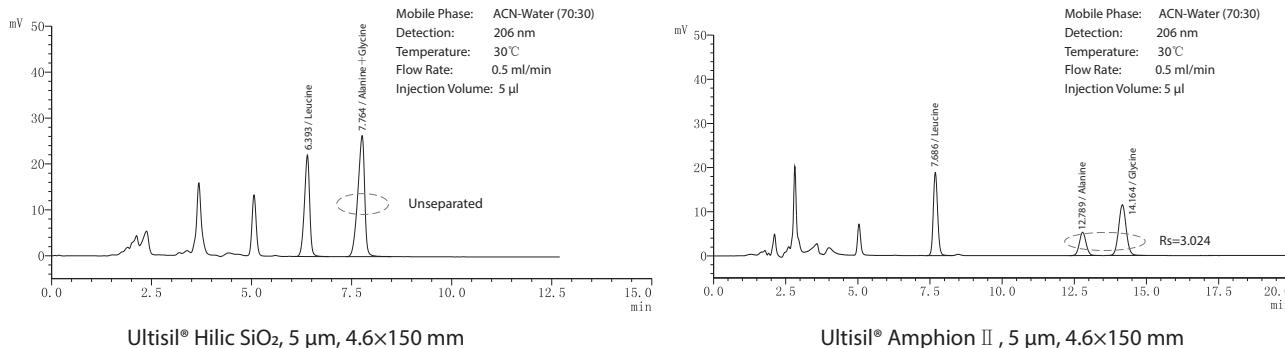

| | |
|---------------------------------------|------------------------|
| Structural Formula | |
| pH Range | 2.0-8.0 |
| Particle Size | 5 μm |
| Surface Area(m^2/g) | 320(120 \AA) |
| Carbon Loading(%) | 6(120 \AA) |
| USP List | L114 |
| Endcapped | N/A |

Comparison

Separation of 4 Polar Compounds (Dicyandiamide, Azacytosine, Melamine, Ammeline)

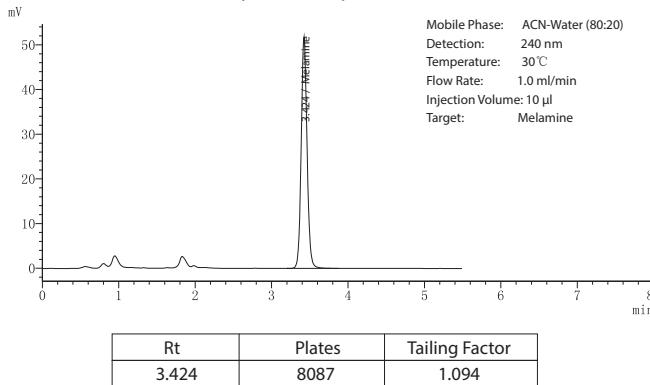

Separation of 3 Aliphatic Amino Acids (Leucine, Alanine, Glycine)

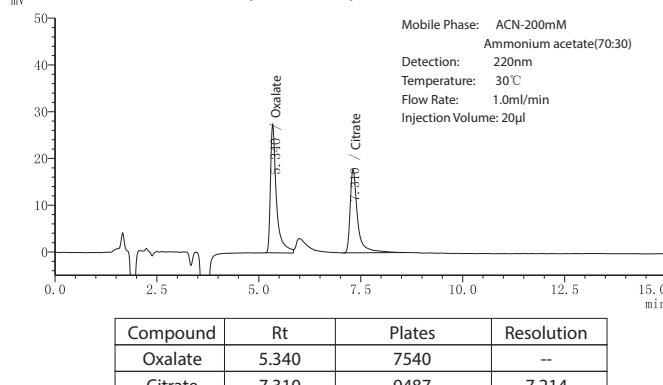

Determination of Melamine

Column: Ultisil® Amphion II, 5 µm, 4.6×150 mm

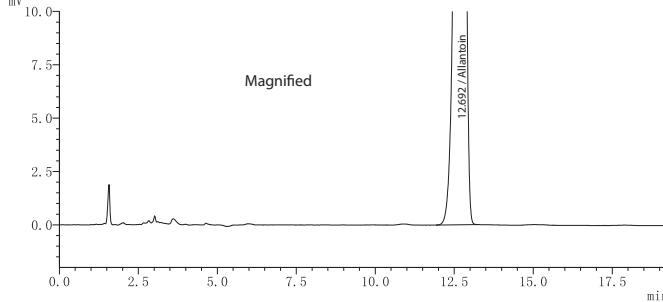

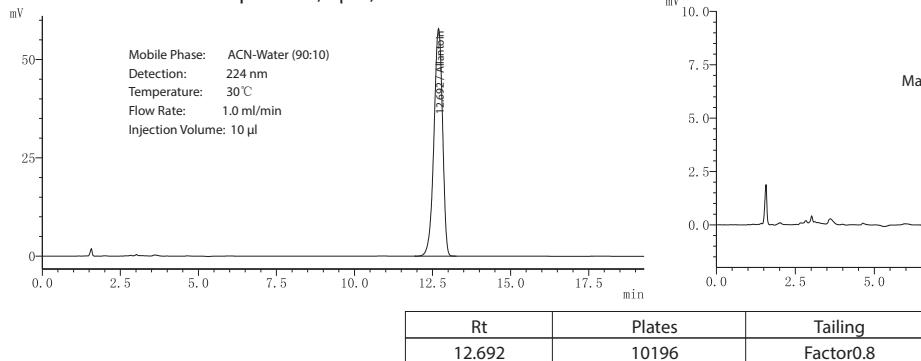

Separation of Citrate and Oxalate

Column: Ultisil® Amphion II, 5 µm, 4.6×150 mm

Determination of Allantoin

Column: Ultisil® Amphion II, 5 µm, 4.6×250 mm

Before use, flush with 50 column volumes of mobile phase (acetonitrile/water, 80:20) to equilibrate. Before injection, flush with 20 column volumes of mobile phase to equilibrate. For gradient analysis, flush with 10 column volumes of original mobile phase between

Note:

- 1) Shifts of retention time may occur, if not sufficiently equilibrated.
- 2) Acetonitrile is the most common mobile phase solvent in HILIC mode. Other water-soluble polar organic solvents can also be used as mobile phases. The comparison of elution strength is: THF < Acetone < Acetonitrile < Isopropanol < Ethanol < Methanol < Water.
- 3) Long-period equilibration required, after using buffer salt mobile phase (like ammonium formate, ammonium acetate etc.) and buffer salt being flushed off.
- 4) After use, flush off the buffer salt in the column and store in 100% acetonitrile solvent.

Ultisil® Amino Acid

Ultisil® Amino Acid HPLC columns are made from spherical, totally porous, and ultra-high purity (>99.999%) type B silica particles. Our proprietary surface modification before bonding generates a very smooth and uniform surface with less acidic surface silanol. Ultisil® Amino Acid columns provide the best performance in peak shape, efficiency and resolution for the analysis of 18 amino acids. Complete sample preparation can be achieved in as short as 30 min.

Ultisil® AA(Amino Acid)

Ultisil® Amino Acid Plus

Ultisil® Amino Acid Plus column is a dedicated column which through further optimizing the analysis method on the basis of the original column for amino acid analysis. It uses an evaporative light scattering detector to detect more kinds of amino acids with higher stability without derivation of amino acid.

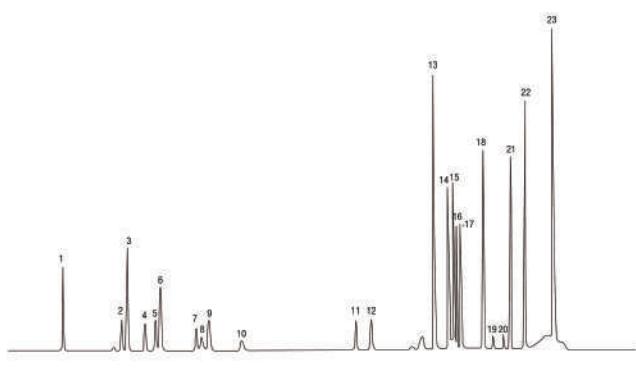

Ultisil® Amino Acid Plus

| | |
|---------------------------------|------------|
| pH Range | 1.0-7.0 |
| Particle Size | 5 µm |
| Surface Area(m ² /g) | 320(120 Å) |
| Carbon Loading(%) | 10(120 Å) |
| USP List | L1 |
| Endcapped | Yes |

Features

- Separate 23 amino acids by reverse-phase chromatographic analysis without the need of derivation, which makes amino acid analysis more convenient and flexible
- Amino acids which separated and derived from proteolytic products, cell culture medium, food and feed have better resolution
- The special column for amino acid analysis has superb reproducibility and stability, ensuring the stability and reliability of quantitative and qualitative analysis results
- Excellent selectivity and separation, allowing you to get more accurate analysis results
- Multiple interference factors such as reagents, by-products and solvents can be removed by fast extraction
- Adhere to strict quality control standards, each column had been tested with 23 amino acids before sold, ensuring the reliability of the results

Separation of 23 Amino Acids

| | |
|-------------------|-------------------|
| 1. Taurine | 2. Glycine |
| 3. Serine | 4. Aspartic acid |
| 5. Hydroxyproline | 6. Glutamine |

Ultisil® OAA(Organic Acids)

Ultisil® OAA is a dedicated reversed-phase column developed by Welch Materials for the detection of water-soluble organic acids. It is designed for efficient and high-throughput organic acid analysis. Compared with the conventional reversed- phase C18 column, OAA column has better performance and higher resolution with more uniform peaks through improvement of the unique bonding technology.

For water-soluble organic acids with larger polarity, if the proportion of organic phase reduces to 5% on C18 column, effective retention may not be achieved. Further reduction of the organic phase or even 100% of the aqueous phase, is prone to cause phase collapse. With optimized bonding technology and the surface hydrophilic treatment of packing materials, Ultisil® OAA column can greatly improve the column's resistance to aqueous phase and the peak shape of organic acid compounds.

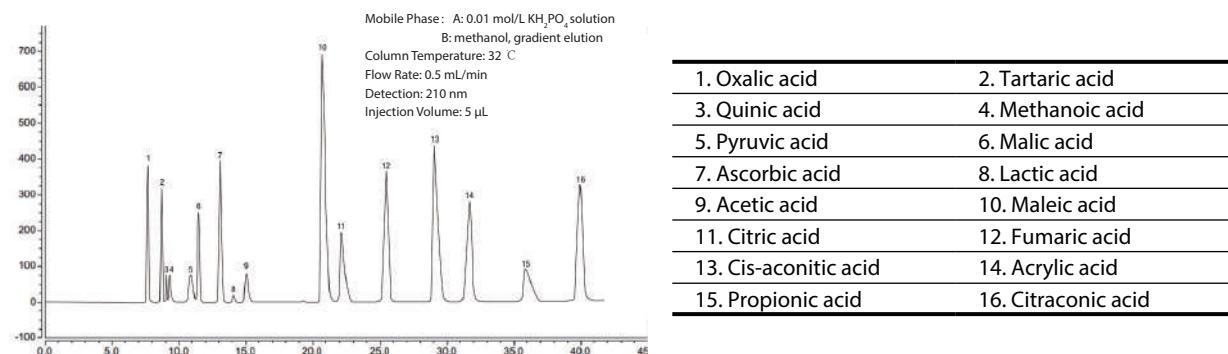

Ultisil® OAA

| | |
|---------------------------------|------------|
| pH Range | 2.0-8.0 |
| Particle Size | 5 µm |
| Surface Area(m ² /g) | 320(120 Å) |
| Carbon Loading(%) | 10(120 Å) |
| USP List | L1 |
| Endcapped | Yes |

Features

- Excellent separation ability for hydrophilic organic acids
- Each column has been tested to ensure excellent hydrolysis stability for hydrophilic organic acid analysis
- Compatible with 100% aqueous phase, having good retention for polar compounds
- Ideal selectivity for a variety of organic acids, with high column efficiency and excellent peak shape
- Excellent in separating hydroxyl fatty acids and aromatic organic acids, optimal choice for organic acid analysis in the pharmaceutical industry, food and beverage detection industry

Separation of 16 kinds of organic acids

Ultisil® Mixed Mode Phase(MM C18/SCX & MM NH₂/CN)

Ultisil® Mixed mode phase, whose selectivity is totally different from conventional reversed phase, is a new packing material that is the development trend of liquid chromatography. There are three modes in the mixed mode phase: reversed phase/anion exchange, reversed phase/cation exchange, reversed phase/amphoteric compound.

Ultisil® Chiral Column

Ultisil® Chiral Columns are based on spherical silica particles coated with chiral polymers (amylose derivatives or cellulose derivatives). Welch offers 5 µm and 10 µm particles, and four types of chiral columns: Cellu-D, Cellu-J, Amy-D and Amy-s. 80% of all racemic compounds can be separated by these four chiral columns.

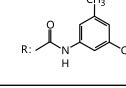

Ultisil® Cellu-D/Cellu-DR

Cellulose tris (3,5-dimethylphenylcarbamate) coated silica

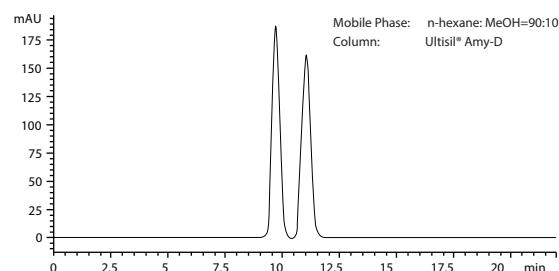

| | |
|---------------------------------|--|
| Structural Formula |  R:  |

Ultisil® Lead Oxide Column

Ultisil® Lead oxide column was specially designed for the detection of malachite green and colorless malachite green in aquatic products by HPLC methods in SC/3021-2004 standard. Because the colorless malachite green fails to absorb in the visible, it is necessary to use this column to oxidize colorless malachite green to malachite green, which solves the difficulty of UV detection of colorless malachite green.

Ultisil® PG-C18

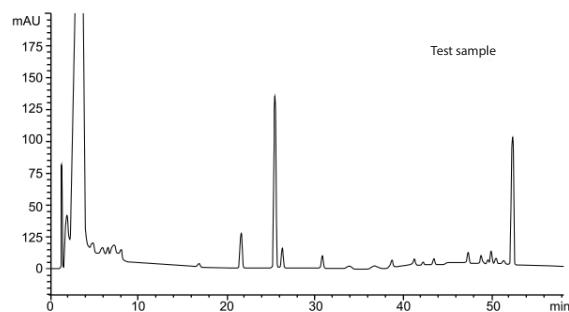

Ultisil® PG-C18 column is a new generation of dedicated column which has unique selectivity for the analysis of ginsenoside with good peak symmetry and high column efficiency. As active ingredients in panax notoginseng, ginseng, red ginseng and American ginseng, Ginsenosides Rg1 and Re also have similar chromatographic properties. It is usually difficult to achieve a resolution of 1.5 on conventional C18 columns (i.e., baseline separation) for that they are very sensitive to the proportion of acetonitrile in the mobile phase. Even a 1% nuance in that will cause a great change in their appearing time, so they can only be seen and separated on the C18 column at about 20% of acetonitrile. Due to this special property, the choice of adjusting the mobile phase to increase the resolution is restricted.

Xtimate® Series HPLC Column

---Next generation beyond mid-range priced Ultisil® series

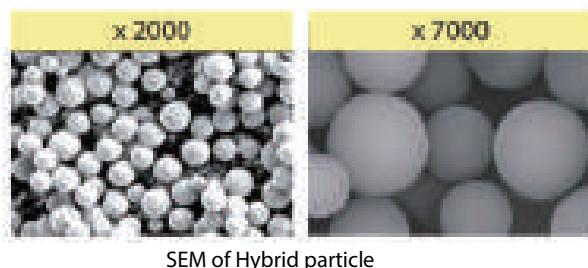

Features

- Extra pH range: wide pH range from 1.0 to 12.5, excellent peak shape for strong bases
- Extra column lifetime: 5 times of similar product such as Gemini
- Extra performance: column efficiency of 5μm columns is as high as 90000/m, 2-3 times of that of Xterra
- Extra care from Welch: enjoy excellent pre-sales and after-sales service from Welch

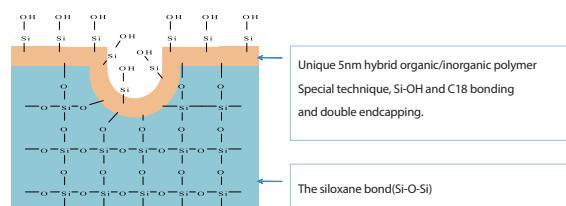

Xtimate® Silica Based HPLC Column

Xtimate® HPLC column derives its outstanding performance from a special hybrid particle based technique, which coats a unique 5nm organic/inorganic polymer layer on the silica surface, so that the pH range is extended to 1.0-12.5.

Xtimate® column is designed for HPLC method development. Regardless of the types of mobile phase or high temperature, Xtimate® HPLC column always has stable performance and long lifetime.

Hybrid Particles Based Xtimate Technology

Comparison of Peak Shape After Soaking In Base

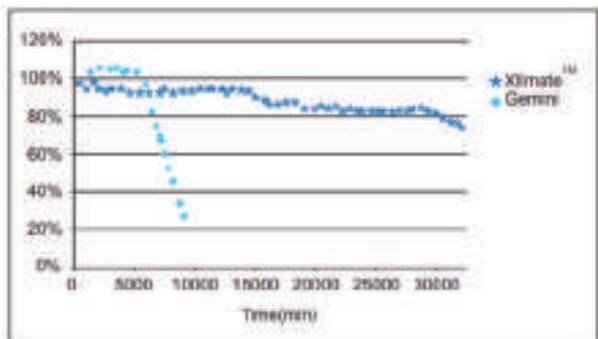

| | |
|---------------|---|
| Column: | Xtimate® C18, 5 μm, 150 x 4.6 mm |
| Mobile Phase: | CH ₃ CN/0.01N-NaOHaq.(pH=12)=30/70 |
| Flow Rate: | 1.0ml/min |
| Temperature: | 40°C |
| Soak Time: | 4 hours |

| | |
|---------------|--|
| Column: | Ultisil® C18, 5 μm, 150 x 4.6 mm |
| Mobile Phase: | CH ₃ OH/H ₂ O=60/40 |
| Flow Rate: | 1.0 mL/min |
| Temperature: | 40°C |
| Detector: | UV 254nm |
| Samples: | 1.Uracil 2.Methyl benzoate 3.Toluence 4.Naphthalene |

After test at pH 12 condition for 4h, the peak shape of hybrid particles based Xtimate® column shows no difference.

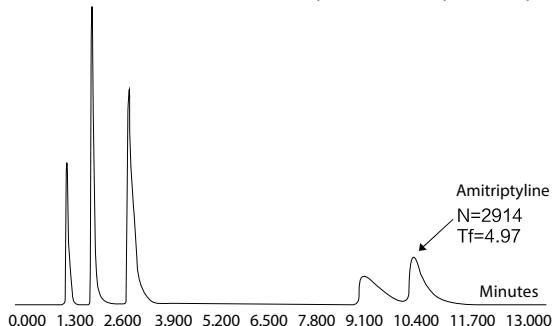

Lifetime Test Comparison: 5 Times Longer Than Gemini

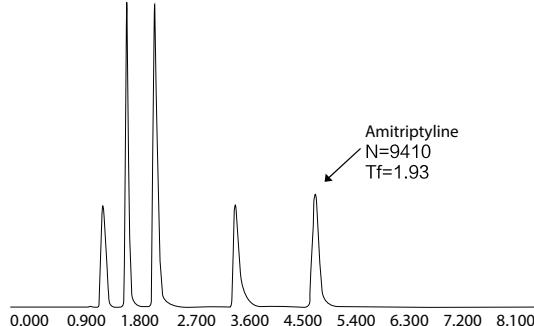

| | |
|-------------------|---|
| Column: | Xtimate® C18, 5 μ m, 150x4.6 mm / Gemini C18, 5 μ m, 150x4.6 mm |
| Mobile Phase: | A: 10mM Ammonium Bicarbonate pH 10.5 B: 90:10 Acetonitrile/buffer |
| Gradient Program: | 0% to 100% B in 10min. 100% B for 7min. 0% B for 3min. |
| Flow Rate: | 1.0 mL/min |
| Temperature: | 50°C |
| Detector: | UV 254 nm |
| Samples: | 1.Uracil 2.Methyl benzoate 3.Toluence 4.Naphthalene |

Unprecedented Peak Shape

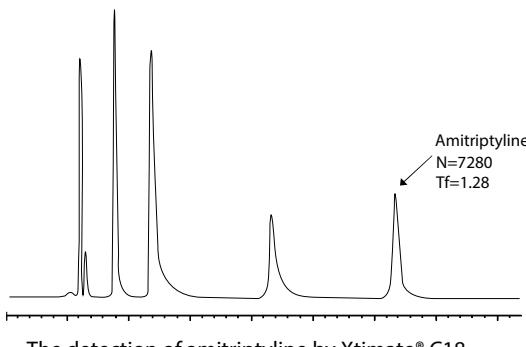

At mid pH, strong bases usually exhibit bad tailing due to secondary interactions between the analytes and the surface silaols. In Welch's unique technique, the hybrid layer totally covers the surface silanols and blocks analytes' access to these surface silanols. Improved bonding and endcapping further reduce silanol activity. As a result, hybrid particle based Xtimate® columns show unprecedented peak shape.

The detection of amitriptyline by poor endcapping product

The detection of Amitriptyline by Symmetry C18

The detection of amitriptyline by Xtimate® C18

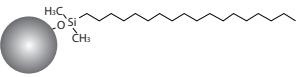

Xtimate® HPLC Column

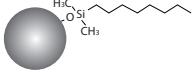

Besides C18 and C8 bonded phases, Xtimate also provides C4, CN, Phenyl bonded phases.

Xtimate® applies a new special Smoothpak™ technique to C18, C8, C4, CN, Phenyl and amino phases, different than the bonding method of other series. As a result, Xtimate® provides a different selectivity, improved stability and reproducibility. In particular, for the Phenyl phase of Phenyl-Hexyl, Xtimate® is totally different from Ultisil® Phenyl. Xtimate® Phenyl phase's longer hexyl group provides extra hydrocarbon interaction and longer retention than conventional phenyl-propyl phase; it also provides better chemical stability. Welch also adds polar embedded phase, Polar-RP on Xtimate® particles, to further improve peak shape for very polar and strong basic

Xtimate® C8 300Å

Welch launched a new Xtimate® C8 300Å column to meet the needs of biopharmaceutical customers to detect protein samples at high pH , and to provide our customers a column with high column efficiency, long life and wide pH range.

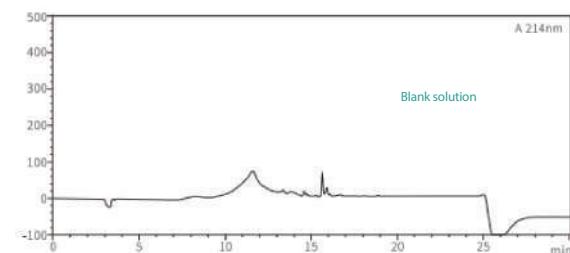

Features

- The pH range is widened to 1.0-12.5
- Excellent stability for high pH applications
- Excellent peak shape for strong alkaline compounds

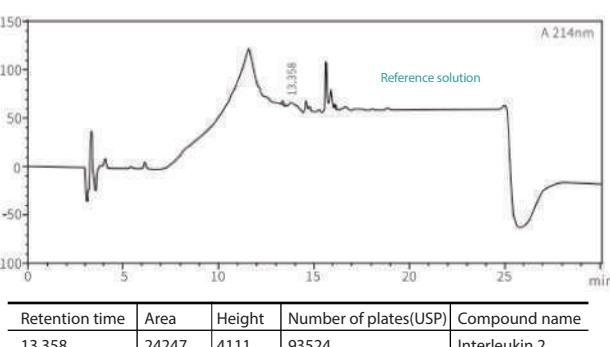

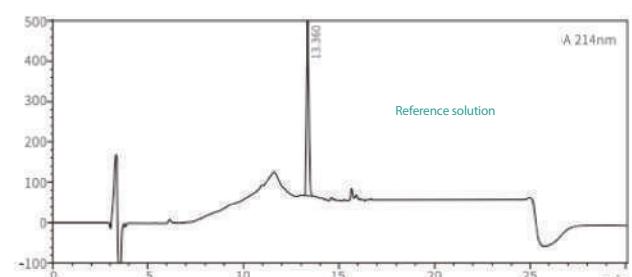

Xtimate® C8

| | | | |
|---------------------------------|---|-------------------|----------|
| Structural Formula |  | | |

Xtimate® XB-SCX

Xtimate® XB-SCX column which formed by cations bonded silica gel packing materials is mainly used for the separation of metformin hydrochloride. This column not only makes the resolution of melamine and metformin much greater than 10, but also makes dicyandiamide have excellent peak shape, which completely avoids the interference of solvent peak to dicyandiamide.

Xtimate® XB-SCX

Xtimate® Polymer Based Column

Xtimate® Sugar-H is a special column designed for Ribavirin. Packed with H⁺ modified low-linking polystyrene-divinybenzene spheres (PS-DVB), this column can be applied for the analysis of organic acids and mixed alcohols.

Xtimate® Sugar-Ca is a strong cation exchange column packed with Ca²⁺ modified PS-DVB resins, can be used for the analysis of sugar products.

Xtimate® PS/DVB is based on polystyrene-divinybenzene. This column can be used in extreme conditions(pH 1-14).

Xtimate® Sugar-H

| | |
|---------------|----------------|
| pH Range | 1.0-3.0 |
| Particle Size | 5 μm, 8 μm |
| Cross-link | 8% |
| Counter Ion | H ⁺ |
| USP List | L17 |
| Max. Temp. | 95°C |

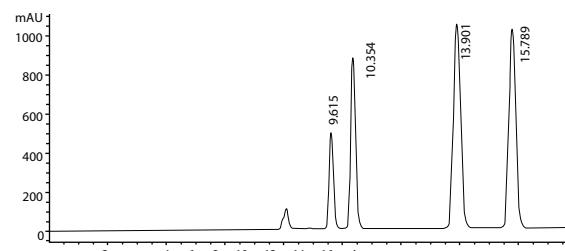

Xtimate® Sugar-Ca

| | |
|---------------|------------------|
| pH Range | 5.0-9.0 |
| Particle Size | 5 μm, 8 μm |
| Cross-link | 8% |
| Counter Ion | Ca ²⁺ |
| USP List | L19 |
| Max. Temp. | 95°C |

Xtimate® PS/DVB

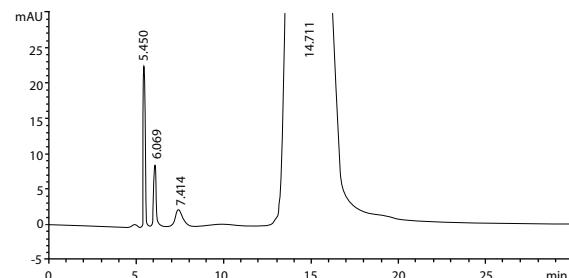

| | |
|---------------------------------|-------------|
| pH Range | 1.0-14.0 |
| Particle Size | 5 μm, 10 μm |
| Surface Area(m ² /g) | 450(300 Å) |
| USP List | L21 |
| Max. Temp. | 75°C |

Separation of Organic Acids

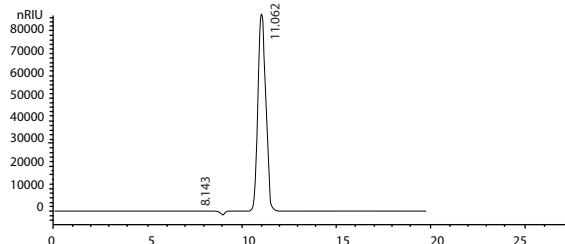

| | |
|-------------------|--|
| Column: | Xtimate® Sugar-H, 5 μm, 300 x 7.8 mm |
| Mobile Phase: | H ₂ SO ₄ water solution (pH 2.0) |
| Flow Rate: | 0.5 mL/min |
| Temperature: | 60°C |
| Detector: | RID |
| Injection Volume: | 20 μL |
| Organic Acids: | Maleic acid, L-malic acid, fumaric acid, sodium acetate trihydrate |

Ketophenylalanine Calcium

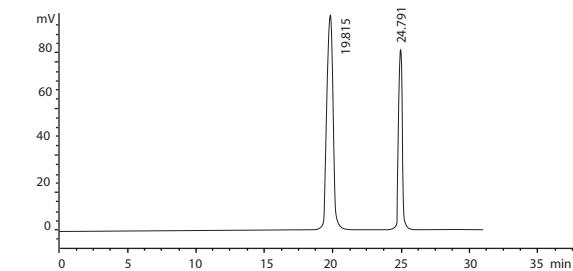

| | |
|-------------------|---|
| Column: | Xtimate® Sugar-H, 5 μm, 300 x 7.8 mm |
| Mobile Phase: | 0.025 mol/L H ₂ SO ₄ water solution |
| Flow Rate: | 0.8 mL/min |
| Temperature: | 20°C |
| Detector: | 205 nm |
| Injection Volume: | 20 μL |

Xylose

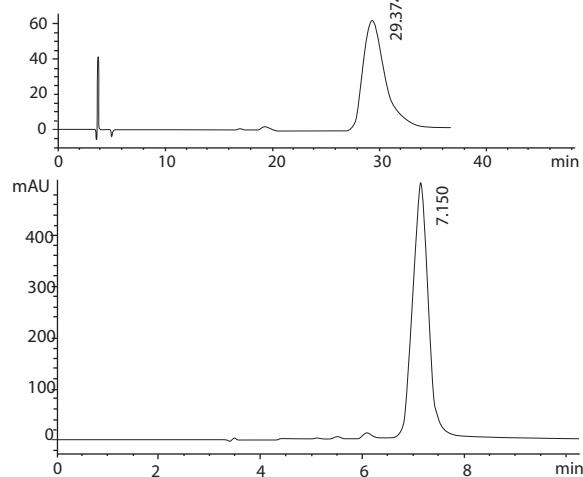

| | |
|-------------------|---------------------------------------|
| Column: | Xtimate® Sugar-Ca, 5 μm, 300 x 7.8 mm |
| Mobile Phase: | Ultra-pure water |
| Flow Rate: | 0.6 mL/min |
| Temperature: | 85°C |
| Detector: | RID 55°C |
| Injection Volume: | 20 μL |

Mannitol

| | |
|--------------------------|---------------------------------------|
| Column: | Xtimate® Sugar-Ca, 8 µm, 300 x 7.8 mm |
| Mobile Phase: | Ultra-pure water |
| Flow Rate: | 0.5 mL/min |
| Temperature: | 80°C |
| Detector: | 20 µL |
| Injection Volume: | R of mannitol and Sorbitol >2 |

Doxycycline HCl

| | |
|--------------------------|---|
| Column: | Xtimate® PS/DVB, 8 µm, 250 x 7.8 mm |
| Mobile Phase: | 50g TBA with 100 mL water, 200 mL buffer (pH 8.0), 25 mL TBAHS(10g/L, pH 8.0, adjust with NaOH), 5 mL EDTA(40 g/L, pH 8.0, adjust with NaOH), dilute to 500 mL with water |
| Flow Rate: | 2.0 mL/min |
| Temperature: | 75°C |
| Detector: | 254 nm |
| Injection Volume: | 20 µL |
| Notes: | Be sensitive to column temperature |

Xtimate® SEC

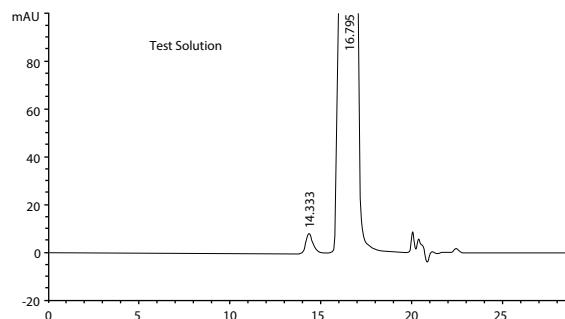

Xtimate® SEC (size exclusion chromatography), also known as "global protein hydrophilic modified silica column", is made from ultra-high purity, stable silica bonded with hydrophilic polymer and diol functional groups. This double bonding mechanism, which makes possible of nonspecific adsorption of high Mw polymers, proteins, biological enzymes, polypeptides and other biological samples, can be applied to separating water-soluble polymers from biomacromolecules.

Features:

- Ultra-high purity, stable silica bonded with hydrophilic polymer and diol functional groups.
- 5 µm or 3 µm silica microsphere, high separation efficiency.
- 120 Å minibore columns fit for analysis of polar compounds such as cephalosporins; 300Å ones fit for biomacromolecules such as proteins and polypeptides.
- Five pore sizes: 120 Å, 300 Å, 500 Å, 700 Å and 1000 Å.

Topsil® Series HPLC Column

Topsil® series HPLC column is a next-generation column by Welch, besides Ultisil®, Xtimate® and Welchrom®. This series use different silica and provide different selectivity.

Features:

- High purity silica (99.99%) with 150 Å pore size and 260 m²/g surface area
- 12% carbon loading for C18 phase
- Because of large pore and moderate carbon loading, Topsil C18 phase can also be used as AQ-C18 without phase collapse
- Endcapped for excellent peak shape and lifetime
- Lower back pressure than Ultisil, almost the same column efficiency as Ultisil
- Good for small molecules and peptides
- Topsil phases including C18, C8, Phenyl-Hexyl, Silica, NH₂ and CN

Topsil® C18

| Structural Formula | |
|---------------------------------|------------|
| pH Range | 2.0-9.5 |
| Particle Size | 3 μm, 5 μm |
| Surface Area(m ² /g) | 260(150 Å) |
| Carbon Loading(%) | 12(150 Å) |
| USP List | L1 |
| Endcapped | Yes |

Topsil® C8

| Structural Formula | |
|---------------------------------|------------|
| pH Range | 2.0-9.5 |
| Particle Size | 3 μm, 5 μm |
| Surface Area(m ² /g) | 260(150 Å) |
| Carbon Loading(%) | 10(150 Å) |
| USP List | L7 |
| Endcapped | Yes |

Topsil® NH₂

| Structural Formula | |
|---------------------------------|------------|
| pH Range | 2.0-8.0 |
| Particle Size | 5 μm |
| Surface Area(m ² /g) | 260(150 Å) |
| Carbon Loading(%) | 3(150 Å) |
| USP List | L8 |
| Endcapped | No |

Topsil® CN

| Structural Formula | |
|---------------------------------|------------|
| pH Range | 2.0-8.0 |
| Particle Size | 5 μm |
| Surface Area(m ² /g) | 260(150 Å) |
| Carbon Loading(%) | 6(150 Å) |
| USP List | L10 |
| Endcapped | Yes |

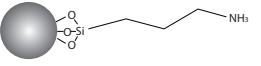

Topsil® Silica

| Structural Formula | |
|---------------------------------|------------|
| pH Range | 2.0-8.0 |
| Particle Size | 5 μm |
| Surface Area(m ² /g) | 260(150 Å) |
| Carbon Loading(%) | N/A |
| USP List | L3 |
| Endcapped | No |

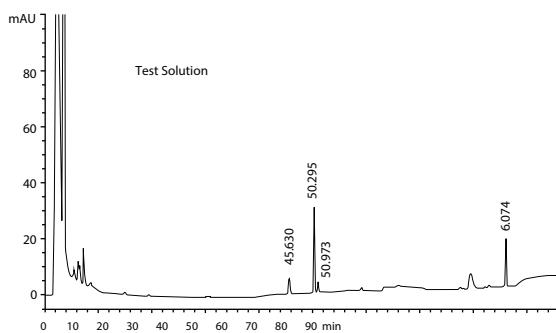

Topsil® Phenyl-Hexyl

| Structural Formula | |
|---------------------------------|------------|
| pH Range | 2.0-9.5 |
| Particle Size | 3 μm, 5 μm |
| Surface Area(m ² /g) | 260(150 Å) |
| Carbon Loading(%) | 12(150 Å) |
| USP List | L11 |
| Endcapped | Yes |

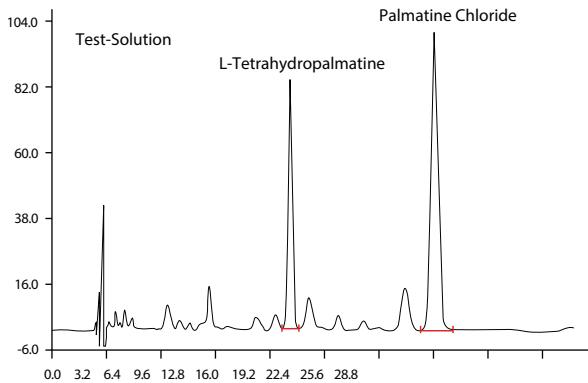

Topsil® HILIC NH₂

| | |
|---------------------------------|---|
| Structural Formula |  |
| pH Range | 2.0-8.0 |
| Particle Size | 5 µm |
| Surface Area(m ² /g) | 260(150 Å) |
| Carbon Loading(%) | 3(150 Å) |
| USP List | L8 |
| Endcapped | No |

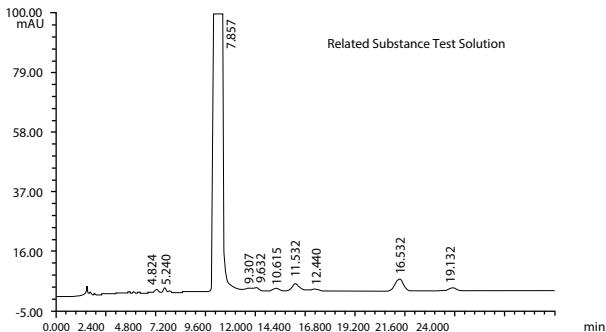

Compound Salvia Tablets

Epigaeal Sraphaia Root

Ketoprofen

| | |
|-------------------|--|
| Column: | Topsil® C18, 250x4.6 mm, 5 µm |
| Mobile Phase: | 25 mM sodium acetate buffer(2% trimethylamine, adjust pH to 3.50 with acetic acid) |
| Flow Rate: | 1.5 mL/min |
| Temperature: | 40°C |
| Detector: | 280 nm |
| Injection Volume: | 20 µL |

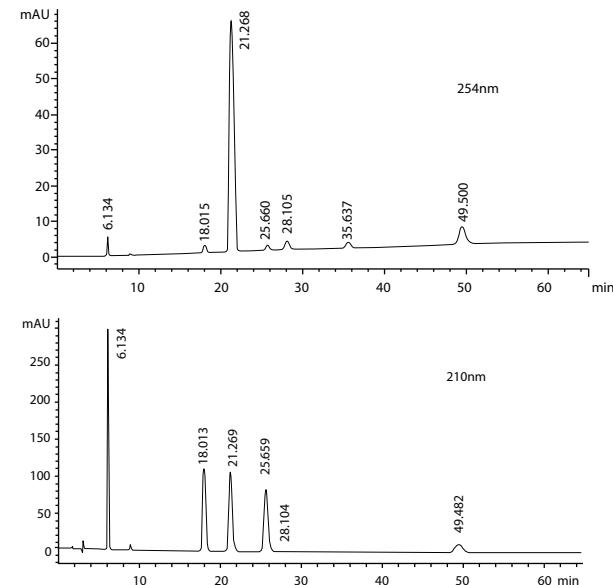

| | |
|-------------------|---|
| Column: | Topsil® C18, 150x4.6 mm, 5 µm |
| Mobile Phase: | Phosphate buffer (68g KH ₂ PO ₄ dissolve in 1000 mL water, adjust pH to 3.5 with H ₃ PO ₄) |
| Flow Rate: | 1.0 mL/min |
| Temperature: | 30°C |
| Detector: | 233 nm |
| Injection Volume: | 20 µL |

Vitamin D3

| | |
|-------------------|----------------------------------|
| Column: | Topsil® Silica, 250x4.6 mm, 5 µm |
| Mobile Phase: | N-hexane/n-amyl alcohol=99.7/0.3 |
| Flow Rate: | 2.0 mL/min |
| Temperature: | 30°C |
| Detector: | 254 nm |
| Injection Volume: | 20 µL |

Sex hormone in Cosmetics

| | |
|-------------------|---|
| Column: | Topsil® Phenyl-Hexyl, 250x4.6 mm, 5 µm |
| Mobile Phase: | Methanol/water=60/40 |
| Flow Rate: | 1.0 mL/min |
| Temperature: | 30°C |
| Detector: | 210 nm, 254 nm |
| Injection Volume: | 20 µL |
| Mixed Standards: | Estrogen: estradiol, oestrone, estrostilben, estriol Androgen: testosterone, methyltestosterone Progestational hormone:progesterone |

Welchrom® Seires HPLC Column

-- Combination of perfect peak shape and lowest back pressure

Features:

- Perfect peak shape and low back pressure
- Ultra-high purity (>99.999%) Type B silica particles
- New Bonding and endcapping technique
- Economically priced

Welchrom® C18

| Structural Formula | |
|---------------------------------|------------|
| pH Range | 1.5-10.0 |
| Particle Size | 5 µm |
| Surface Area(m ² /g) | 320(120 Å) |
| Carbon Loading(%) | 19(120 Å) |
| USP List | L1 |
| Endcapped | Yes |

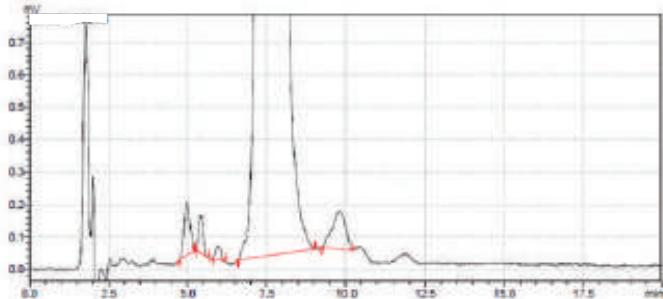

Welchrom® C8

| Structural Formula | |
|---------------------------------|------------|
| pH Range | 1.5-10 |
| Particle Size | 5 µm |
| Surface Area(m ² /g) | 320(120 Å) |
| Carbon Loading(%) | 12(120 Å) |
| USP List | L7 |
| Endcapped | Yes |

Comparison with other brands

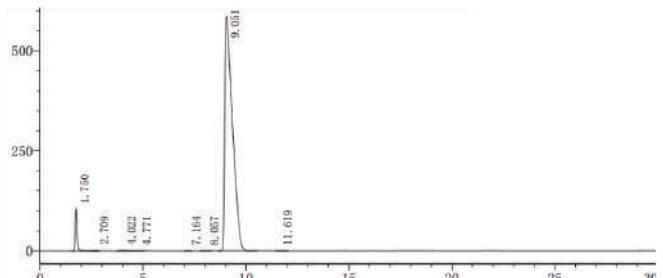

| Brands | Tailing factor(amitriptyline) | Back pressure(Methanol/H ₂ O)=75/25 |
|------------------|-------------------------------|--|
| Welchrom® XB-C18 | 1.29 | 77 bar |
| Chrom C18 | 1.52 | 108 bar |
| Sino Chrom C18 | 1.71 | 106 bar |
| BinChrom C18 | 1.67 | 102 bar |

Butenafine HCL

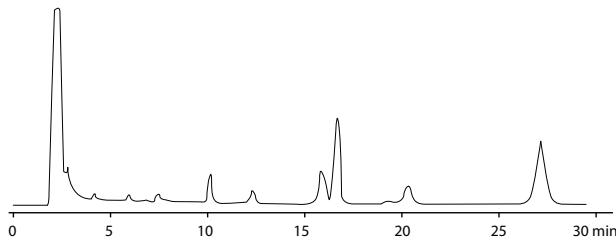

| | |
|-------------------|--|
| Column: | Welchrom® C18, 4.6x250 mm, 5 µm |
| Mobile Phase: | Acetate buffer/methanol/isopropanol=17/70/13 |
| Flow Rate: | 1.0 mL/min |
| Temperature: | Ambient |
| Detector: | 282 nm |
| Injection Volume: | 10 µL |

Pentoxyverine citrate

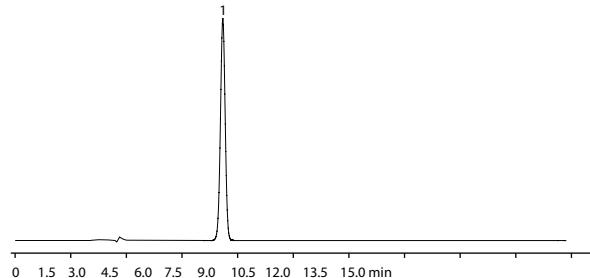

| | |
|-------------------|--|
| Column: | Welchrom® C18, 4.6x150 mm, 5 µm |
| Mobile Phase: | Water* /methanol=45/55 * Dilute 10 mL triethylamine to 1000 mL, adjust pH 3.0 with H ₃ PO ₄ |
| Flow Rate: | 1.0 mL/min |
| Temperature: | 30°C |
| Detector: | 215 nm |
| Injection Volume: | 20 µL |

Tanshinone IIA in Salvia Miltiorrhiza

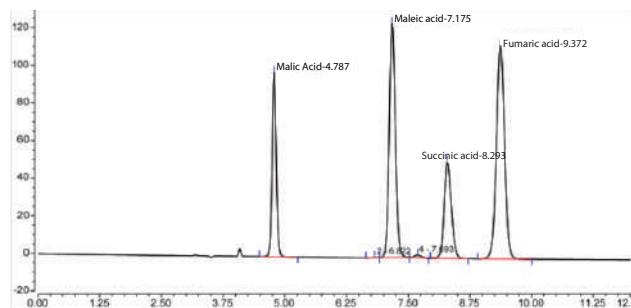

| | |
|---------------|---------------------------------|
| Column: | Welchrom® C18, 4.6x250 mm, 5 µm |
| Mobile Phase: | Methanol/water=75/25 |
| Flow Rate: | 1.0 mL/min |
| Temperature: | 22°C |
| Detector: | 270 nm |

Imidacloprid

| | |
|---------------|---------------------------------|
| Column: | Welchrom® C18, 250x4.6 mm, 5 µm |
| Mobile Phase: | Methanol/water=45/55 |
| Flow Rate: | 1.0 mL/min |
| Temperature: | 25°C |
| Detector: | 260 nm |

Malic acid

| | |
|-------------------|--|
| Column: | Welchrom® C8, 4.6x250 mm , 5 µm |
| Mobile Phase: | Phosphoric acid/methanol/water=1/100/900 |
| Flow Rate: | 0.8 mL/min |
| Temperature: | 20°C |
| Detector: | 214nm |
| Injection Volume: | 5 µL |

Welchrom® Vantage C18

Welchrom® Vantage C18 column uses ultra-pure fully porous spherical silica as the matrix, and adopts the unique stationary phase bonding process and silica surface treatment technology. It is a new liquid phase with high column efficiency and high selectivity. The column has excellent chromatographic peak shape, separation efficiency, stability and reproducibility, and is especially suitable for the detection and application of multi-component complex matrices.

Features

- Perfect peak shape and low back pressure
- Ultra-high purity(>99.999%) Type B silica particles
- New bonding and endcapping technique
- Economically priced

Welchrom® Vantage C18

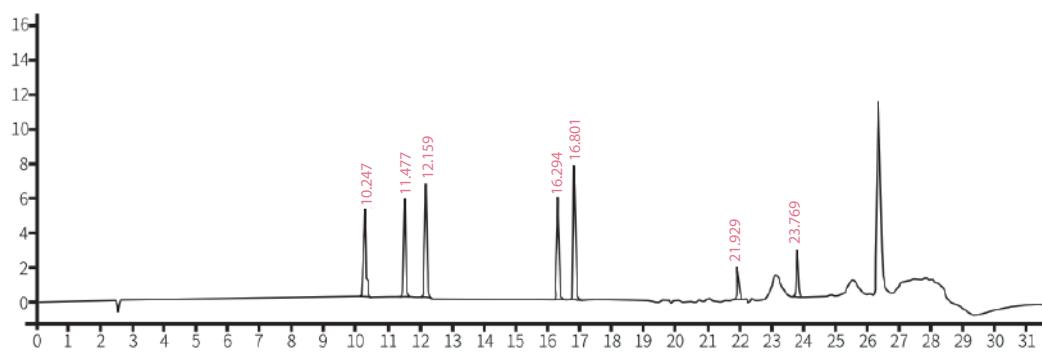

| Structural Formula |  |
|---------------------------------|---|
| pH Range | 2.0-8.0 |
| Particle Size | 5 μm |
| Surface Area(m ² /g) | 280(130 Å) |
| Carbon Loading(%) | 13(130 Å) |
| USP List | L1 |
| Endcapped | Yes |

Applications

Seven Colorants in Cola

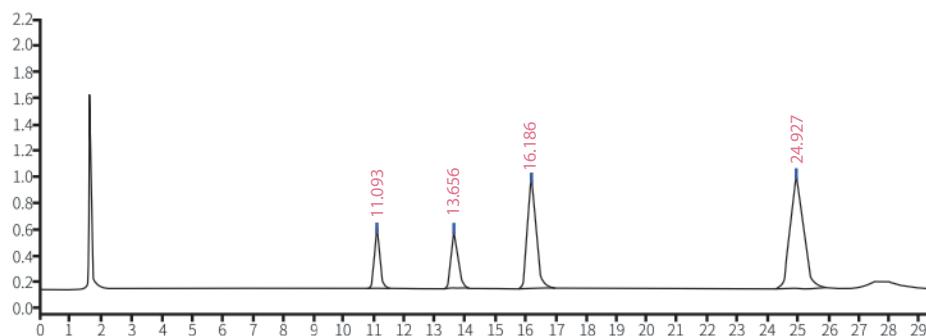

| | |
|-------------------|--|
| Column: | Welchrom® Vantage C18 Column (4.6×250mm, 5um) |
| Mobile Phase: | Mobile Phase A: Acetonitrile Mobile Phase B: 100mM Ammonium Acetate |
| Flow Rate: | 1.0 mL/min |
| Temperature: | 40°C |
| Injection volume: | 10μL |
| Detector: | 245 nm |

| Time (min) | Mobile phase A(%) | Mobile phase B (%) |
|------------|-------------------|--------------------|
| 0 | 3 | 97 |
| 5 | 6 | 94 |
| 11 | 14 | 86 |
| 22 | 40 | 60 |
| 25 | 40 | 60 |
| 25.1 | 3 | 97 |
| 35 | 3 | 97 |

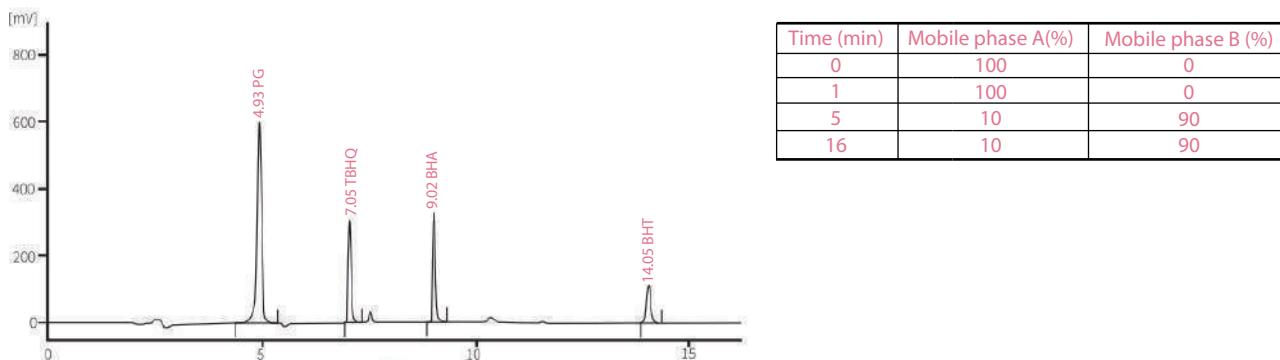

Foxin in Fish

| | |
|-------------------|--|
| Column: | Welchrom® Vantage C18 Column (4.6×250mm, 5um) |
| Mobile Phase: | 10mM tetrabutylammonium bromide (pH adjusted by phosphoric acid=3.0):acetonitrile=94:6 |
| Flow Rate: | 1.0 mL/min |
| Temperature: | 35°C |
| Injection volume: | 10µL |
| Detector: | Excitation wavelength 280nm, emission wavelength 480nm |

Antioxidants in food

| | |
|-------------------|---|
| Column: | Welchrom® Vantage C18 Column (4.6×250mm, 5um) |
| Mobile Phase: | Mobile phase A: water: acetonitrile = 60: 40, containing 1% acetic acid Mobile phase B: acetonitrile (containing 1% acetic acid) |
| Flow Rate: | 1.0 mL/min |
| Temperature: | 40°C |
| Injection volume: | 10µL |
| Detector: | 245nm |

Ordering Information

| P/N | Specification |

| 00360-04044 | Welchrom® Vantage C18, 5um, 4.6×300mm |

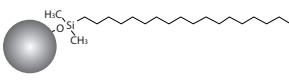

UHPLC Column

Welch also offers Ultisil® UHPLC (1.8 µm) columns. With high column efficiency and good lot-to-lot reproducibility, Ultisil® UHPLC can generate high quality data, decreasing the probability of repeated sample analyses while reducing the consumption of solvent at the same time. Ultisil® UHPLC series offer a variety of bonded phases, specified guard columns and pre-columns for the users to design and realize faster and more environmentally friendly chromatography applications with higher resolution.

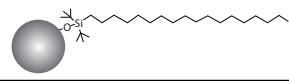

Feature

- Ultra resolution: same resolution as or better than that of conventional column which has more packing materials.
- Ultra speed: UHPLC offers more information per unit time and higher speed owing to its smaller particles.
- Sensitivity: higher N, narrower peak width (W), higher peak height. The system sensitivity of 1.8 µm UHPLC is 70% and 40% higher than that of conventional column of 5µm and 3.5µm packings, respectively.

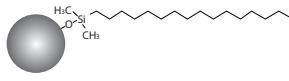

Ultisil® UHPLC XB-C18

| | |
|---------------------------------|---|
| Structural Formula |  |
| pH Range | 1.5-10.0 |
| Particle Size | 1.8 µm |
| Surface Area(m ² /g) | 320(120 Å) |

Ultisil® UHPLC AQ-C18

| | |
|---------------------------------|---|
| Structural Formula |  |
| pH Range | 1.5-10.0 |
| Particle Size | 1.8 µm |
| Surface Area(m ² /g) | 320(120 Å) |
| Carbon Loading(%) | 12(120 Å) |
| USP List | L1 |
| Endcapped | Yes |

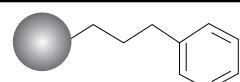

Ultisil® UHPLC Polar-RP

| | |
|---------------------------------|---|
| Structural Formula |  |
| pH Range | 1.5-10.0 |
| Particle Size | 1.8 µm |
| Surface Area(m ² /g) | 320(120 Å) |
| Carbon Loading(%) | 18(120 Å) |
| USP List | L1 |
| Endcapped | Yes |

Ultisil® UHPLC HILIC

| | |
|---------------------------------|------------|
| Structural Formula | |
| pH Range | 2.0-8.0 |
| Particle Size | 1.8 µm |
| Surface Area(m ² /g) | 320(120 Å) |
| Carbon Loading(%) | N/A |
| USP List | L3 |
| Endcapped | No |

Ultisil® UHPLC XB-Phenyl

| | |
|---------------------------------|---|
| Structural Formula |  |
| pH Range | 1.5-10.0 |
| Particle Size | 1.8 µm |
| Surface Area(m ² /g) | 320(120 Å) |
| Carbon Loading(%) | 12(120 Å) |
| USP List | L11 |
| Endcapped | Yes |

Hardware Features:

- New design
- Low dead volume
- New special frit

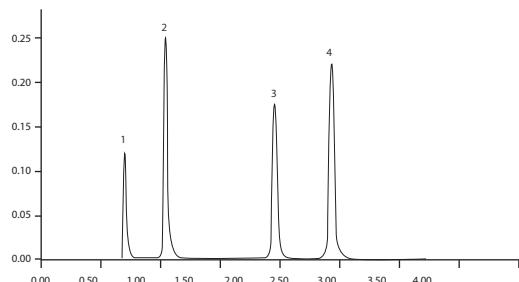

Packing Materials Features:

- High efficiency 1.8µm particles
- High column efficiency and excellent strength
- Variety of bonding chemistries
- Stable column bed, highest pressure: 15000psi

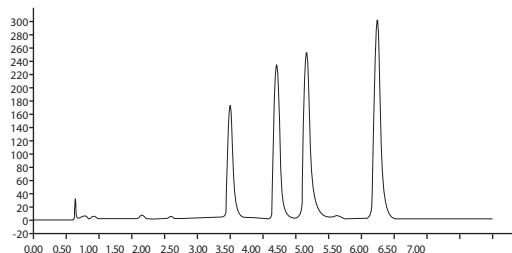

Column Packing Features:

- Unique column packing technique
- Withstand ultra-high pressure of UHPLC instruments

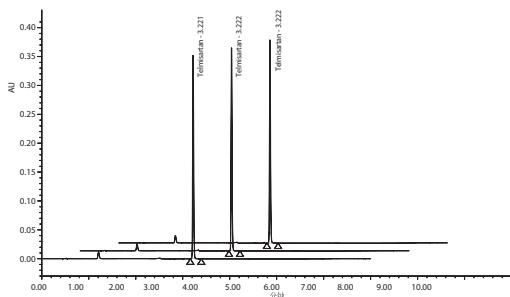

| | |
|-------------------|---|
| Column: | Ultisil® UHPLC XB-C18, 2.1 ×100 mm, 1.8 µm |
| Mobile Phase: | Acetonitrile/water=65/35 |
| Gradient Program: | 254 nm |
| Temperature: | Ambient |
| Flow Rate: | 0.35 mL/min |
| Injection Volume: | 2 µL |
| Back Pressure: | 5000 psi |
| Instrument: | Water Acuity UPLC |
| Samples in Order: | Uracil Phenol 4-chloronitrobenzene Toluene |

Analysis of Aflatoxin

| | |

|  | 00808-01222 | Direct Connect Precolumn inline Filter, with 0.2µm Replacement Frits×5, 18000 psi |
| | 00808-UF020 | Replaceable frits (0.2 µm) |

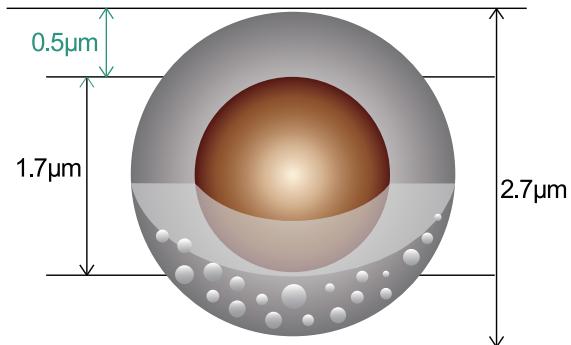

Boltimate® Core-Shell HPLC Column

Welch Boltimate® core-shell HPLC column particle size is 2.7 μm , which consists of 1.7 μm solid core and 0.5 μm porous layer(porous shell).

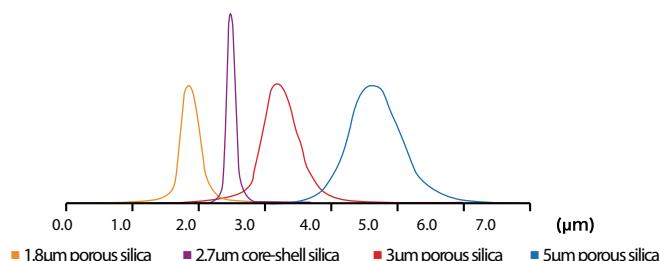

This kind of column can provide sub-2 μm efficiencies (~200000 p/m) and high resolution at much lower back pressure. Boltimate core-shell column can be used on both HPLC and UHPLC system, and method optimization is also very easy.

Features

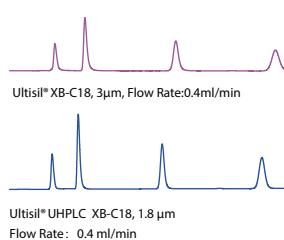

- Provide sub-2 μm efficiencies (~200000 p/m) and ultra-high resolution at much lower back pressure
- Ultra fast separation
- Compatible with both HPLC and UHPLC system
- Narrow particle size distribution
- A standard 2 μm inlet firt is used to resist plugging with dirty samples, suitable for complex sample
- A variety of bonding phases provide different selectivities, excellent peak shape and lot-to-lot reproducibility
- Maximum pressure: 600 bar

With the solid core and thin porous layer, the diffusion distance of sample molecular decreased, which means fast mobile phase flow rate can be used to increase the analytical speed. Compared with traditional porous HPLC columns, Boltimate core-shell column has the narrower particle size distribution, which provides higher column efficiency, higher resolution and lower back pressure.

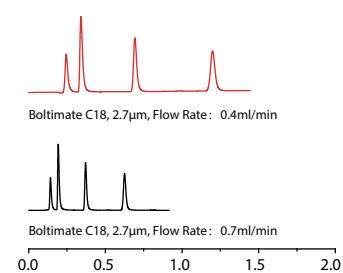

| | D10 | D90 | D90/D10 |
|-----------------------------------|------|------|---------|
| 5μm porous silica | 3.61 | 5.22 | 1.44 |
| 3μm porous silica | 2.83 | 3.98 | 1.41 |
| 1.8μm porous silica | 1.51 | 2.11 | 1.40 |
| 2.7μm Boltimate core-shell silica | 2.51 | 2.81 | 1.12 |

Column: 2.1×50 mm
Mobile phase: ACN:H₂O=60:40
Temperature: 24 C
HPLC instrument: Agilent 1290
Flow cell: 1 μL
Injection Value: 1 μL

Ultisil® UHPLC XB-C18, 1.8 μm
Flow Rate: 0.4 ml/min

Samples:
1. Uracil
2. Phenol
3. 4-Chloro Nitrobenzene
4. Naphthalene

Boltimate C18, 2.7 μm , Flow Rate: 0.7 ml/min

| Column | Theoretical plates | Column Pressure (bar) | Time |
|--|--------------------|-----------------------|---------|
| Ultisil® XB-C18, 3 μm , 2.1×50 mm | 5600 | 85 | 2.0 min |
| Ultisil® UHPLC XB-C18, 1.8 μm , 2.1×50 mm | 10500 | 260 | 1.8 min |
| Boltimate® C18, 2.7 μm , 2.1×50 mm | 10100 | 108 | 1.5 min |
| Boltimate® C18, 2.7 μm , 2.1×50 mm | 9500 | 190 | 0.8 min |

Boltimate C18 column efficiency is almost the same with 1.8 μm porous C18 column, and two times of 3 μm porous C18 column.

Even with 2X faster flow rate, the pressure of Boltimate is still lower than 1.8 μm porous C18 column with the same column dimensions run under the same analysis conditions, without decreasing efficiency at the mean time.

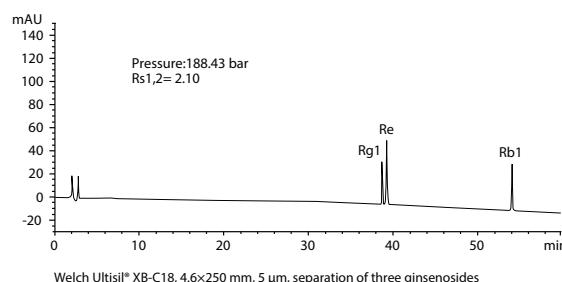

Detection of Ginsenosides:

Chromatographic conditions:

Column: three types of C18 columns from Welch / Temperature: room temperature / Detection : UV 203 nm
 Mobile phase A: 0.1%H₃PO₄ in water / Mobile phase B: Acetonitrile

1. Welch Ultisil® XB-C18(4.6×250 mm, 5 μm)

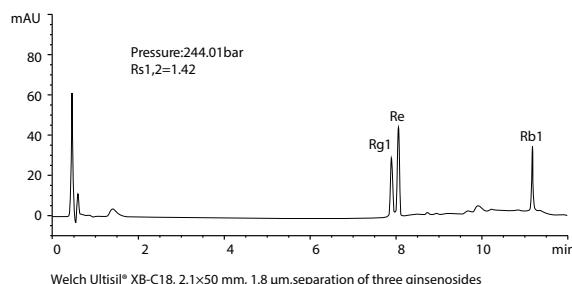

Flow Rate: 1.3 mL/min Injection Volume: 10 μL

Gradient program:

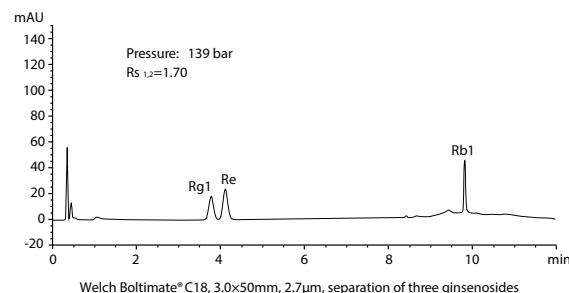

| Time(min) | Mobile Phase A (%) | Mobile Phase B (%) |
|-----------|--------------------|--------------------|
| 0 | 81 | 19 |
| 30 | 81 | 19 |
| 35 | 76 | 24 |
| 60 | 60 | 40 |

Blossmate® Seires HPLC Column

Blossmate series column is a high-end HPLC column launched by Welch Materials. Compared with Xtimate and Ultisil series, Blossmate's column performance and reproducibility have been improved in an all way and it is especially suitable for the detection of multi-component impurity projects.

Features:

- It adopts a new generation of ultra-high-purity fully porous silica gel, which greatly ensures the perfect column efficiency and separation performance.
- Each column is tested individually with special testing prodecure under stricter standards, which guarantee the quality and performance of the column.
- Extremely stable separation performance to ensure better analysis reproducibility and perfect peak shape.
- Excellent batch-to-batch reproducibility, especially for the analysis of multi-impurity component applications.
- Blossmate uses a unique bonding process that enables the column to withstand high water phase, high pH experimental environments.

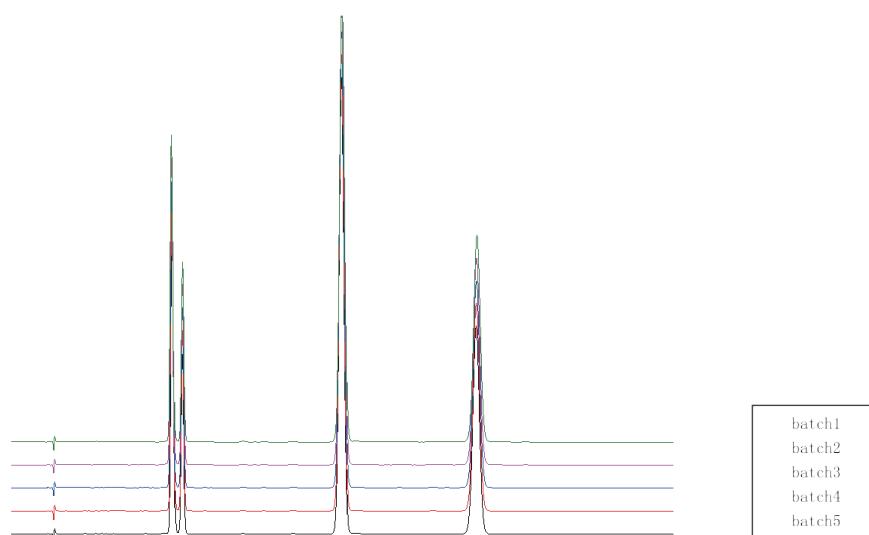

Blossmate® Series Silica

Blossmate® series HPLC column uses a new fully porous silica packing materials, which has higher silica purity, more uniform particle size and more uniform pore size distribution. Under the unique packing process and strict quality control conditions, Blossmate silica not only has the high mechanical strength and high column efficiency, but also has the perfect and excellent reproducibility, makes it to be the best choice for highly reproducible project.

Blossmate® series columns provide better reproducibility, higher efficiency and higher peak capacity.

Blossmate® series columns use a new high-purity fully porous silica and Welch's unique bonding process and double end-capping techniques to ensure that the silica surface has a higher inertness, and thus has a more symmetrical peak shape and higher column efficiency.

Blossmate columns adopt high-standard strict quality control conditions to ensure that each column has undergone strict quality screening before leaving the factory, which makes the column have better reproducibility and higher peak capacity.

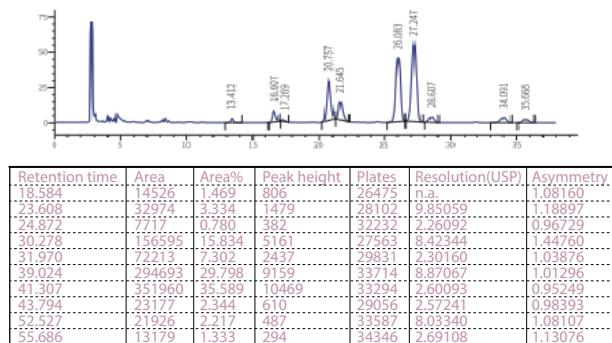

Blossmate® C18

Blossmate® C18 is a general-purpose, highly versatile column which suitable for sample analysis of many complex components, as well as flexible method development under a range of chromatographic conditions.

Blossmate® Polar-Propylamide

Blossmate® Polar-Propylamide column is a high-end series hydrophilic (HILIC) column designed to achieve the separation of large polar drug molecules. Based on ultra high purity and high mechanical strength spherical silica gel, the packing materials effectively bonded the polar propyl amide group. As a new generation of Leonurus dedicated column, its results can meet the test requirements of Chinese Pharmacopoeia I for Leonurus content determination while ensuring excellent reproducibility.

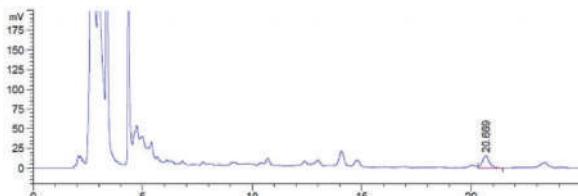

| | | | |

Blossmate® PSV C18

Blossmate® PSV C18 is a newly developed HPLC column which can be compatible with high proportion of aqueous phase. Taking super high purity spherical silica as matrix, it bonded high-density alkyl functional groups. Its packing materials have high selectivity and strong retention ability for hydrophilic and polar compounds which are often difficult to be retained and separated in normal C18 columns. Blossmate® PSV C18 is fully end-capped, which greatly enhances the packing materials' stability. Even under neutral pH condition, it keeps stable baseline and high sensitivity, making it particularly suitable for high efficiency separation columns with LC-MS. Now, it is widely used in the separation and analysis of oligosaccharides, amino acids, small peptides, nucleotides, organic acids and other active components.

Features:

- With strong separation and retention ability, better peak shape, higher column efficiency.
- Remain stable baseline and high sensitivity even under neutral pH condition.
- Suitable for high efficiency separation columns by LC-MS.

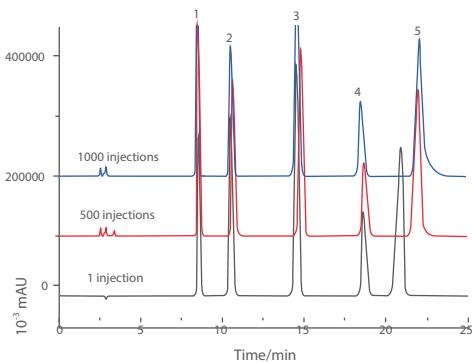

Five food additives

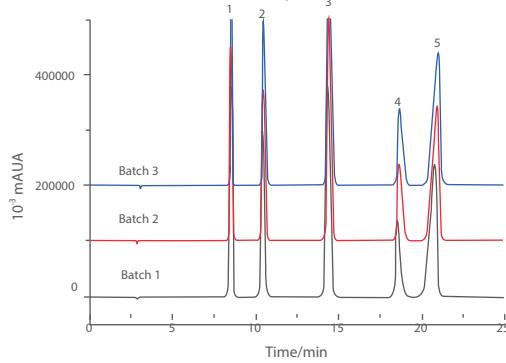

| | |
|-------------------|---|
| Column: | Blossmate® PSV C18 4.6×250 mm, 5 μm |
| Mobile Phase: | 20 mM ammonium acetate solution: methanol=93: 7(on-line blending) |
| Flow Rate: | 1.0 mL/min |
| Temperature: | 30°C |
| Detector: | 230nm |
| Injection Volume: | 5 μL |

Note: When the Blossmate® PSV C18 column is used for the determination of five kinds of food additives, in order to ensure the resolution and the life of the column, the proportion of the water phase in the mobile phase shall not be less than 7%.

High stability, longer lifetime

Excellent batch-to-batch stability

From the results above, multiple batches of column were selected to test the column, showing Blossmate PSV C18 column has excellent reproducibility and stability.

Blossmate® PSV C18 Plus

--the next generation dedicated column for preservatives

Why is the preservative testing so harmful to HPLC columns?

Complex sample matrix but simple pretreatment.

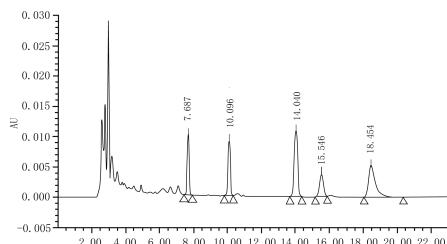

There are many kinds of food on the market, juice, biscuits, cakes, soy sauce, meat.....basically all of them contain preservatives. But for so many kinds of samples, same pretreatment method is used, which leads to a large amount of small molecular impurities and particulate matter are existed in the test samples, which can easily contaminate the column, resulting in a rapid decline in the column performance.

To resolve this problem, Welch launched Blossmate PSV Plus Column to meet your requirements of preservative testing.

Blossmate PSV C18 Plus column adopts the integrated design of the guard column and the analytical column. An integrated guard column is added at the front end of the analytical column to protect the analytical column in all directions. At the same time, the dead volume is small, and the replacement of the cartridge is convenient.

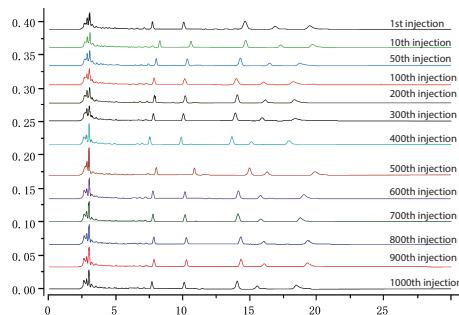

Analysis of Five Food Additives

| | |
|-------------------|---|
| Column: | Blossmate® PSV C18 plus 4.6×250mm, 5μm |

Blossmate® SAX

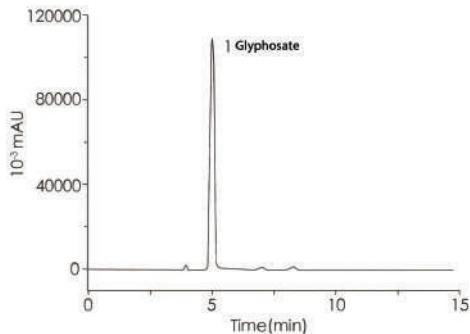

Blossmate® SAX column can be used under the condition of high flow rate and high pressure. It is compatible with ionic strength change of various mobile phase to achieve fast equilibrium and suitable for the separation and purification of polar small molecules and other biological macromolecules compounds, such as glyphosate, nucleotides, proteins and peptides.

Features:

- Based on ultra pure spherical silica gel, bonded quaternary ammonium functional group with high density and high mechanical strength.
- Remain stable baseline and high sensitivity even under neutral pH condition.
- Compatible with organic solvent and mobile phase of buffer salts, remain stable chromatographic properties.
- Comply with the standard of determination of glyphosate, excellent batch to batch stability and long lifetime, ensuring efficient analysis properties.

| | | | |
|---------------|--------------------------------------|---------------------------------|------------|
| Bonded phase | Quaternary ammonium functional group | Surface Area(m ² /g) | 300(120 Å) |
| pH Range | 2-8 | Carbon Loading(%) | 6.5(120 Å) |
| Particle Size | 5 μm | USP List | L14 |
| Endcapped | No | | |

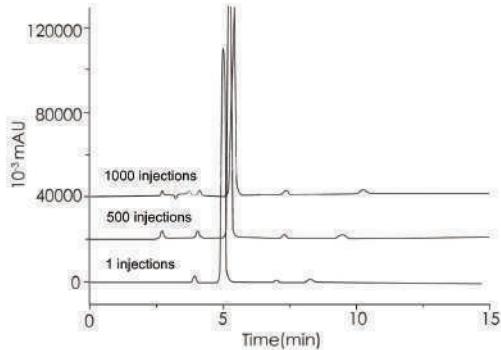

Glyphosate

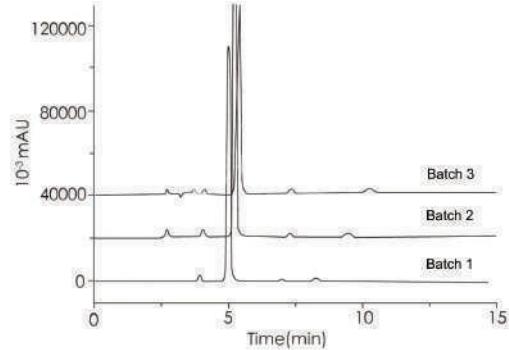

| | |
|-------------------|---|
| Column: | Blossmate® SAX, 4.6×250mm, 5μm |

Blossmate® C4

Welch Materials has launched a new Blossmate® C4 column, which fully meets the needs of detecting various biological samples, and provides customers with a HPLC column with higher accuracy, faster peak output, lower cost and a wider range of protein measurement.

Features:

Higher Accuracy: Porous particle silica packing (3.5μm) with large pore size (450Å) to improve protein resolution.

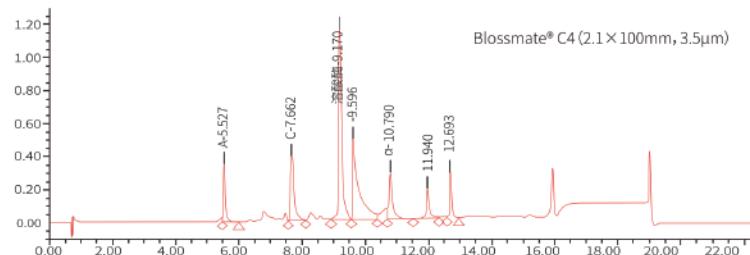

Faster peak times: Compared to columns packed with the same size fully porous particles, the analysis time is shorter.

Lower cost: Stable porous layer packed bed and 2μm inlet frit prevent inlet clogging, thus extending column life.

Wider testing range: measurable protein molecular weight 12kDa-250kDa.

Multi-Batch LC Column Bundles

—Multi-batch column combinations suitable for analytical method development and method validation

Method development and validation

Analytical method validation is essential to demonstrate the quality, reliability and consistency of a developed chemical drug or biologic. Proper validation methods provide documented proof of method performance and specify ongoing measures to ensure quality monitoring of method life. However, insufficient method validation remains an important issue in drug development and manufacturing. Improper execution can result in product approval delays, incomplete API (Active Pharmaceutical Ingredient) development, or regulatory delays in commercialization.

During the method development process, experienced chromatographers realize that any method developed using a uniquely selective column must be easily transferable and reproducible in the laboratory, while being independent of the LC system used. Platform restrictions.

Different batches of columns to escort your method validation

The Welch Materials Multi-Lot LC Column Bundle contains three different lots of columns. The column uses ultra-high-purity spherical silica as the matrix, and is bonded with high-density alkyl functional groups, which has stable selectivity and column efficiency, and is an ideal choice for your method development and validation.

| Ultisil Plus C18 | Ultisil Plus C18, 5 μm , 4.6 \times 250mm, 3pk | K260-31043-3P |
| Ultisil Polar RP | Ultisil Polar RP, 5 μm , 4.6 \times 250mm, 3pk | K215-31043-3P |

*Special instructions: This product does not provide a trial, once sold, it will not be returned.

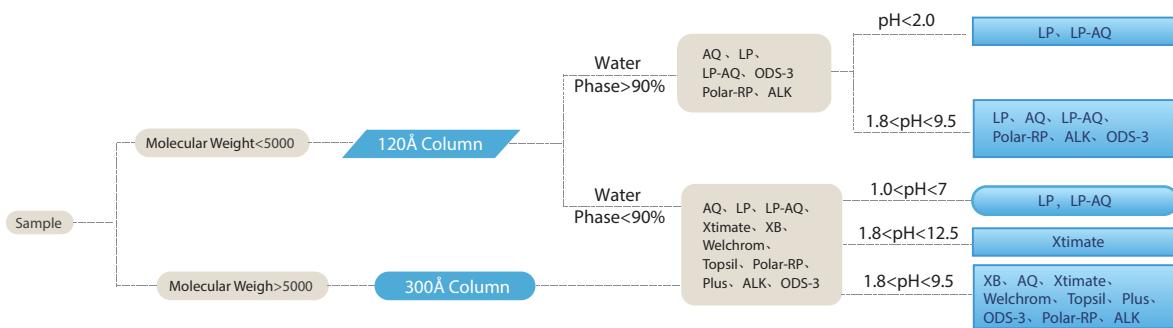

Appendix

1. Selection of Analysis Modes

Selection 1

Selection 2

2. Method Development Tool Kit for Pharmaceutical Industry

This kit consists of different columns with different bonding phases and selectivities. Please refer to details below for the application range. Besides columns, the tool kit also includes technical support from Welch technical team throughout the development of methods.

To develop a new method, purpose and requirements of the analysis shall first be confirmed, thus ideal parameters and results can be confirmed. First of all shall be the HPLC mode, which determined normally by following factors:

- Type and solubility of target compound
- Molecular weight of target compound
- Sample matrix
- Available stationary phases and columns

★ Please select the tool kit based on preliminary analysis of above tips.

The "Universal" Kit

| Column | Bonded phase | USP | Dimension | Description | Application range |
|---------------------------------|------------------|-----|--------------------|--|---|
| Xtimate® C18 | C18 | L1 | 4.6 × 250mm, 5µm | Organic-inorganic hybridized surface; high chemical stability under high-content buffer salts conditions High pH tolerance (1.0–12.5); Double end-capped, high universality. | First choice for beginning; Great universality; Better peak shape. |
| Ultisil® LP-C18 | C18 | L1 | 4.6 × 250mm, 5µm | Side chain steric protection to shield hydroxyl group; No end-capping (pH range 0.5–8.0); High steric hindrance selectivity; 100% water to 0% water and normal reagents applicable; Little loss on MS or ELSD under strong acid conditions. | First choice for mobile phase pH under 2; Strong orthogonality with Xtimate C18 column. |
| Ultisil® XS-C18 | C18 | L1 | 4.6 × 250mm, 5µm | Unique high-density bonding, high carbon capacity, double end-capping; high steric hindrance selectivity, strong separation ability for mixture of planar solid structure; applies to separation of structural isomerism. | Strong orthogonality with normal C18 column; First choice for separating isomers. |
| Ultisil® Polar-RP | C18 | L1 | 4.6 × 250mm, 5µm | Polar group embedded in carbon chain of reversed-phase C18 stationary phase, brings good retention and peak symmetry for strong polar and alkaline substances; Embedded polar group enables hydrophilic stationary phase, with better retention of materials not retained on normal C18, and high tolerance to high water content mobile phase. | 100% water tolerable; First choice for strong polar substances. |
| Ultisil® XB-Phenyl | Phenyl | L11 | 4.6 × 250mm, 5µm | Classic reverse-phase bonding phase, provides better selectivity for benzene rings compared to linear alkane bonded phases. | Substance containing benzene rings. |
| Ultisil® PFP | Phenyl | L11 | 4.6 × 250mm, 5µm | Fluorinated stationary phase, stronger ion exchange and polarity than alkyl stationary phase; Good selectivity for halogen-containing substances and structural isomers. | Separation of positional isomers on phenyl ring; Substance with halogen substituent. |
| Ultisil® XB-NH ₂ | NH ₂ | L8 | 4.6 × 250mm, 5µm | First choice for sugar compounds | Polar compounds or sugar |
| Ultisil® HILIC SiO ₂ | SiO ₂ | L3 | 4.6 × 250mm, 5µm | Most classic bonding phase in HILIC mode. | Strong polar compound |
| Ultisil® UHPLC XB-C18 | C18 | L1 | 2.1 × 100mm, 1.8µm | Ultra high pressure LC, shortening retention time. | Fast separation under ultra high pressure. |
| Boltimate® EXT-C18 | C18 | L1 | 3.0 × 100mm, 2.7µm | Low column pressure, high efficiency. | Fast separation in normal LC system |

Tool Kits for "Special Application"

"High-Select & Universal" Kit

Contains: Ultisil® XB-C18, Ultisil® LP-C18, Xtimate® C18
Dimension: 4.6*250mm, 5µm (other dimensions also available)

- Applies to method screening, for general chromatographic analysis requirements;
- Suitable for strong polar compounds, acidic, neutral, alkaline substances.

"Isomer Analysis" Kit

Contains: Ultisil® PFP, Ultisil® PAH, Ultisil® Hilic SiO₂
Dimension: 4.6*250mm, 5µm (other dimensions also available)

- Applies to isomer mixtures.
- Strong selectivity for ortho, para, meta isomers on indophenol ring and planar solid structure mixtures.

"Bio-samples Analysis" Kit

Contains: Ultisil® LP-C18 (300Å), Ultisil® XB-C4 (300Å), Ultisil® XB-C8 (300Å)
Dimension: 4.6*250mm, 5µm (other dimensions also available)

- Large pore size (300Å), suitable for macromolecules like proteins or peptides etc, providing better interaction with bonded phases;
- Various bonding phases with different retention, applies to retention and separation of proteins and peptides of various molecular sizes.

"Extended Selectivity" Kit

Contains: Ultisil® Polar-RP, Ultisil® ALK-C18, Ultisil® XB-CN
Dimension: 4.6*250mm, 5µm (other dimensions also available)

- Applies to method screening, for general chromatographic analysis requirements;
- Applies to strong polar or non-polar compounds and alkalines, with high water ratio conditions.

"Hydrophilic Substance Analysis" Kit

Contains: Ultisil® AQ-C18, Ultisil® Polar-RP, Ultisil® LP-C18
Dimension: 4.6*250mm, 5µm (other dimensions also available)

- Applies to strong polar substance without retention on normal C18, or separation of organic acid mixtures;
- Compatible with 100% – 0% water phase mobile phase.

For further details about the columns, please refer to user manual attached with each column.

3. Welch HPLC Column Selection by USP Listing

| HPLC Column | Particle Size | pH Range | Carbon Loading | Surface Area(m ² /g) | Endcapped |
|---|---------------|----------|----------------------|---------------------------------|-----------|
| L1: Octadecyl silane chemically bonded to porous silica or ceramic microparticles, 1.5 to 10 µm in diameter, or a monolithic rod. | | | | | |
| Ultisil XB-C18 | 3, 5, 10 µm | 1.5-10.0 | 17%(120Å), 8%(300Å) | 320(120Å), 90(300Å) | Yes |
| Ultisil AQ-C18 | 3, 5, 10 µm | 1.5-10.0 | 12%(120Å) | 320(120Å) | Yes |
| Ultisil LP-C18 | 3, 5, 10 µm | 0.5-8.0 | 10%(120Å), 5%(300Å) | 320(120Å), 90(300Å) | No |
| Ultisil LP-AQ | 5 µm | 1.0-8.0 | 5%(120Å) | 320(120Å) | No |
| Ultisil Polar-RP | 3, 5, 10 µm | 1.5-10.0 | 18%(120Å) | 320(120Å) | Yes |
| Ultisil AA(Amino Acid) | 5 µm | 1.5-10.0 | 17%(120Å) | 320(120Å) | Yes |
| Ultisil Amino Acid Plus | 5 µm | 1.0-7.0 | 10%(120Å) | 320(120Å) | Yes |
| Ultisil OAA | 5 µm | 1.0-7.0 | 10%(120Å) | 320(120Å) | Yes |
| Ultisil PAH | 3, 5 µm | 1.5-10.0 | 22%(120Å) | 320(120Å) | No |
| Ultisil ALK C18 | 5 µm | 1.5-10.0 | 12%(120Å) | 320(120Å) | Yes |
| Ultisil Plus C18 | 3.5, 5 µm | 2.0-8.0 | 10%(130Å) | 160(130Å) | Yes |
| Ultisil Plus LP-C18 | 5 µm | 0.5-8.0 | 9%(130Å) | 160(130Å) | Yes |
| Ultisil ODS-3 | 3, 5 µm | 2.0-8.0 | 15%(100Å) | 380(100Å) | Yes |
| Ultisil XS-C18 | 3, 5 µm | 2.0-10.0 | 23%(120Å) | 320(120Å) | Yes |
| Ultisil PG-C18 | 5 µm | 2.0-8.0 | 10%(150Å) | 260(150Å) | No |
| Xtimate C18 | 3, 5, 10 µm | 1.0-12.5 | 14%(120Å) | 320(120Å) | Yes |
| Xtimate Polar-RP | 5 µm | 1.0-12.5 | 16%(120Å) | 320(120Å) | Yes |
| Welchrom C18 | 5 µm | 1.5-10.0 | 19%(120Å) | 320(120Å) | Yes |
| Welchrom Vantage C18 | 5 µm | 2.0-8.0 | 13%(130Å) | 280(130Å) | Yes |
| Topsil C18 | 3, 5 µm | 2.0-9.5 | 12%(150Å) | 260(150Å) | Yes |
| Boltimate C18(Core-shell) | 2.7 µm | 2.0-8.5 | 9%(90Å) | 120(90Å) | Yes |
| Boltimate EXT-C18 (Core-shell) | 2.7 µm | 1.5-12.0 | 8%(90Å) | 120(90Å) | Yes |
| Boltimate LP-C18 (Core-shell) | 2.7 µm | 1.0-8.5 | 7%(90Å) | 120(90Å) | No |
| Blossmate C18 | 5 µm | 2.0-8.0 | 14%(100Å) | 300(100Å) | Yes |
| Blossmate Aqs C18 | 5 µm | 2.0-8.0 | 10%(100Å) | 300(100Å) | Yes |
| Blossmate ST C18 | 5 µm | 1.0-11.0 | 12%(100Å) | 300(100Å) | Yes |
| Ultisil UHPLC XB-C18 | 1.8 µm | 1.5-10.0 | 17%(120Å) | 320(120Å) | No |
| Ultisil UHPLC AQ-C18 | 1.8 µm | 1.5-10.0 | 12%(120Å) | 320(120Å) | Yes |
| Ultisil UHPLC LP-C18 | 1.8 µm | 0.5-8.0 | 10%(120Å) | 320(120Å) | No |
| Ultisil UHPLC Polar-RP | 1.8 µm | 1.5-10.0 | 18%(120Å) | 320(120Å) | Yes |
| Xtimate UHPLC C18 | 1.8 µm | 1.0-12.5 | 14%(120Å) | 320(120Å) | Yes |
| L3: Porous silica particles, 1.5 to 10 µm in diameter, or a monolithic silica rod. | | | | | |
| Ultisil SiO ₂ | 3, 5, 10 µm | 2.0-8.0 | N/A | 320(120Å), 90(300Å) | No |
| Ultisil HILIC Silica | 3, 5, 10 µm | 2.0-8.0 | N/A | 320(120Å) | No |
| Ultisil UHPLC HILIC | 1.8 µm | 2.0-8.0 | N/A | 320(120Å) | No |
| Topsil Silica | 5 µm | 2.0-8.0 | N/A | 260(150Å) | No |
| Boltimate HILIC | 2.7 µm | 2.0-8.5 | N/A | 120(90Å) | No |
| L7: Octyl silane chemically bonded to totally porous silica particles, 1.5 to 10 µm in diameter, or a monolithic silica rod. | | | | | |
| Ultisil XB-C8 | 3, 5, 10 µm | 1.5-10.0 | 12%(120Å), 4%(300Å) | 320(120Å), 90(300Å) | Yes |
| Ultisil LP-C8 | 3, 5 µm | 1.0-8.0 | 5.5%(120Å), 3%(300Å) | 320(120Å), 90(300Å) | No |
| Ultisil Plus C8 | 5 µm | 1.5-10.0 | 7%(130Å) | 160(130Å) | Yes |
| Ultisil F-C8 | 3, 5 µm | 1.5-10.0 | 12%(120Å) | 320(120Å) | Yes |
| Xtimate C8 | 3, 5, 10 µm | 1.0-12.5 | 10%(120Å), 5%(300Å) | 320(120Å), 100(300Å) | Yes |
| Welchrom C8 | 5 µm | 1.5-10.0 | 12%(120Å) | 320(120Å) | Yes |
| Topsil C8 | 3, 5 µm | 2.0-9.5 | 10%(150Å) | 260(150Å) | Yes |
| Ultisil UHPLC XB-C8 | 1.8 µm | 1.5-10.0 | 12%(120Å) | 320(120Å) | |
| L8: An essentially monomolecular layer of aminopropyl-silane chemically bonded to totally porous silica gel support, 3 to 10 µm in diameter. | | | | | |
| Ultisil XB-NH ₂ | 3, 5, 10 µm | 2.0-8.0 | 4%(120Å) | 320(120Å) | No |
| Ultisil HILIC-NH ₂ | 3, 5, 10 µm | 2.0-8.0 | 4%(120Å) | 320(120Å) | No |
| Topsil NH ₂ | 5 µm | 2.0-8.0 | 3%(150Å) | 260(150Å) | No |
| Topsil Hilic-NH ₂ | 5 µm | 2.0-8.0 | 3%(150Å) | 260(150Å) | No |
| Xtimate Lactose-NH ₂ | 5 µm | 2.0-8.0 | 7%(120Å) | 450(120Å) | No |
| L9: Irregular or spherical, totally porous silica gel having a chemically bonded, strongly acidic cation-exchange coating, 3 to 10 µm in diameter. | | | | | |
| Ultisil XB-SCX | 3, 5, 10 µm | 2.0-8.0 | 12%(120Å), 5%(300Å) | 320(120Å), 90(300Å) | No |
| Xtimate XB-SCX | 5 µm | 2.0-8.0 | 2%(120Å) | 350(120Å) | No |
| L10: Nitrile groups chemically bonded to porous silica particles, 3 to 10 µm in diameter. | | | | | |
| Ultisil XB-CN | 3, 5, 10 µm | 1.5-9.0 | 7%(120Å) | 320(120Å) | Yes |
| Ultisil LP-CN | 5 µm | 1.0-8.0 | 6%(120Å) | 320(120Å) | No |
| Xtimate CN | 5 µm | 1.0-12.5 | 7%(120Å) | 320(120Å) | Yes |
| Topsil CN | 5 µm | 2.0-8.0 | 6%(150Å) | 260(150Å) | Yes |

| HPLC Column | Particle Size | pH Range | Carbon Loading | Surface Area(m ² /g) | Endcapped |
|---|---------------|----------|------------------------|---------------------------------|-----------|
| L11: Phenyl groups chemically bonded to porous silica particles, 1.5 to 10 µm in diameter. | | | | | |
| Ultisil XB-Phenyl | 3, 5, 10 µm | 1.5-10.0 | 12%(120Å), 4%(300Å) | 320(120Å), 90(300Å) | Yes |
| Ultisil Phenyl-Ether | 5 µm | 1.5-10.0 | 12%(120Å) | 320(120Å) | Yes |
| Ultisil PFP | 3, 5 µm | 1.5-10.0 | 12%(120Å) | 320(120Å) | Yes |
| Ultisil Plus Phenyl | 5 µm | 1.5-10.0 | 8%(130Å) | 160(130Å) | Yes |
| Xtimate Phenyl-hexyl | 3, 5 µm | 1.0-12.5 | 12%(120Å) | 320(120Å) | Yes |
| Topsil Phenyl-hexyl | 3, 5 µm | 2.0-9.5 | 12%(150Å) | 260(150Å) | Yes |
| Boltimate Phenyl-hexyl(Core-shell) | 2.7 µm | 2.0-8.5 | 7%(90Å) | 120(90Å) | Yes |
| Boltimate EXT-PFP(Core-shell) | 2.7 µm | 1.5-12.0 | 5%(90Å) | 120(90Å) | Yes |
| Blossmate Phenyl | 3.5 µm | 1.5-10.0 | 1%(450Å) | 15(450Å) | Yes |
| Ultisil UHPLC XB-Phenyl | 1.8 µm | 1.5-10.0 | 12%(120Å) | 320(120Å) | Yes |
| L13: Trimethylsilane chemically bonded to porous silica particles, 3 to 10 µm in diameter. | | | | | |
| Ultisil XB-C1 | 5 µm | 1.5-10.0 | 4%(120Å) | 320(120Å) | Yes |
| L14: Silica gel having a chemically bonded, strongly basic quaternary ammonium anion-exchange coating, 5 to 10 µm in diameter. | | | | | |
| Ultisil XB-SAX | 3, 5, 10 µm | 2.0-8.0 | 7.5%(120Å), 1.5%(300Å) | 320(120Å), 90(300Å) | No |
| Blossmate SAX | 5 µm | 2.0-8.0 | 6.5%(300Å) | 300(120Å) | No |
| L17: Strong cation-exchange resin consisting of sulfonated cross-linked styrene-divinylbenzene copolymer in the hydrogen form, 7 to 11 µm in diameter. | | | | | |
| Xtimate Sugar-H | 5, 8 µm | 1.0-3.0 | N/A | N/A | N/A |
| L19: Strong cation-exchange resin consisting of sulfonated cross-linked styrene-divinylbenzene copolymer in the calcium form, 9 µm in diameter. | | | | | |
| Xtimate Sugar-Ca | 5, 8 µm | 5.0-9.0 | N/A | N/A | N/A |
| L20: Dihydroxypropane groups chemically bonded to porous silica particles, 1.5 to 10 µm in diameter. | | | | | |
| Ultisil Diol | 3, 5, 10 µm | 2.0-8.0 | 2.5%(120Å) | 320(120Å) | No |
| L21: A rigid, spherical styrene-divinylbenzene copolymer, 3 to 30 µm in diameter. | | | | | |
| Xtimate PS/DVB | 5, 10 µm | 1.0-14.0 | N/A(100Å, 300Å) | N/A | N/A |
| L22: A cation-exchange resin made of porous polystyrene gel with sulfonic acid groups, about 10 µm in size. | | | | | |
| Xtimate Sugar-H | 5, 8 µm | 1.0-3.0 | N/A | N/A | N/A |
| L26: Butyl silane chemically bonded to totally porous silica particles, 3 to 10 µm in diameter. | | | | | |
| Ultisil XB-C4 | 3, 5, 10 µm | 1.5-10.0 | 8%(120Å), 3%(300Å) | 320(120Å), 90(300Å) | Yes |
| Xtimate C4 | 3, 5 µm | 1.0-12.5 | 8%(120Å) | 320(120Å) | Yes |
| Blossmate C4 | 3.5 µm | 1.5-10.0 | 0.5%(450Å) | 15(450Å) | Yes |
| L33: Packing having the capacity to separate dextrans of 4,000 to 500,000 daltons. It is spherical, silica-based and processed to provide pH stability. | | | | | |
| Xtimate SEC-120 | 3, 5 µm | 2.0-7.5 | N/A(120Å) | N/A | N/A |
| Xtimate SEC-300 | 3, 5 µm | 2.0-7.5 | N/A(300Å) | N/A | N/A |
| Xtimate SEC-500 | 5 µm | 2.0-7.5 | N/A(500Å) | N/A | N/A |
| Xtimate SEC-700 | 5 µm | 2.0-7.5 | N/A(700Å) | N/A | N/A |
| Xtimate SEC-1000 | 5 µm | 2.0-7.5 | N/A(1000Å) | N/A | N/A |
| L40: Cellulose tris-3,5-dimethylphenylcarb-amate coated porous silica particles, 5 to 20 µm in diameter. | | | | | |
| Ultisil Cellu-D | 5, 10 µm | 2.0-9.0 | N/A(120Å) | 320(120Å) | N/A |
| L43: Pentafluoro phenyl groups chemically bonded to silica particles 5 to 10 µm in diameter. | | | | | |
| Ultisil PFP | 3, 5 µm | 1.5-10.0 | 13%(120Å) | 320(120Å) | Yes |
| Boltimate EXT-PFP(Core-shell) | 2.7 µm | 1.5-12.0 | 5%(90Å) | 120(90Å) | Yes |
| L51: Amylose tris-3,5-dimethylphenylcarbamate-coated, porous, spherical, silica particles, 5 to 10 µm in diameter. | | | | | |
| Ultisil Amy-D | 5, 10 µm | 2.0-9.0 | N/A(120Å) | 320(120Å) | N/A |
| L56: Propyl silane chemically bonded to totally porous silica particles, 3 to 10 µm in diameter. | | | | | |
| Ultisil LP-C3 | 5 µm | 1.0-8.0 | 4%(120Å) | 320(120Å) | No |
| L59: Packing having the capacity to separate proteins by molecular weight over the range of 5 to 7000 kDa. It is spherical (1.5-10 µm), silica-based, and processed to provide hydrophilic characteristics and pH stability. | | | | | |
| Xtimate SEC-120 | 3, 5 µm | 2.0-7.5 | N/A(120Å) | N/A | N/A |
| Xtimate SEC-300 | 3, 5 µm | 2.0-7.5 | N/A(300Å) | N/A | N/A |
| Xtimate SEC-500 | 5 µm | 2.0-7.5 | N/A(500Å) | N/A | N/A |
| Xtimate SEC-700 | 5 µm | 2.0-7.5 | N/A(700Å) | N/A | N/A |
| Xtimate SEC-1000 | 5 µm | 2.0-7.5 | N/A(1000Å) | N/A | N/A |

| HPLC Column | Particle Size | pH Range | Carbon Loading | Surface Area(m ² /g) | Endcapped |
|---|---------------|----------|----------------|---------------------------------|-----------|
| L60: Spherical, porous silica gel, 10 µm or less in diameter, surface has been covalently modified with alkyl amide groups and endcapped. | | | | | |
| Ultisil Polar-RP | 3, 5, 10 µm | 1.5-10.0 | 18%(120Å) | 320(120Å) | Yes |
| Xtimate Polar-RP | 5 µm | 1.0-12.5 | 16%(120Å) | 320(120Å) | Yes |
| Ultisil UHPLC Polar-RP | 1.8 µm | 1.5-10.0 | 18%(120Å) | 320(120Å) | Yes |
| L62: C30 silane bonded phase on a fully porous spherical silica, 3 to 15 µm in diameter. | | | | | |
| Ultisil XB-C30 | 3, 5, 10 µm | 1.5-10.0 | 22%(120Å) | 320(120Å) | Yes |
| L68: Spherical, porous silica, 10 µm or less in diameter, the surface of which has been covalently modified with alkyl amide groups and not endcapped. | | | | | |
| Ultisil HILIC Amide | 3, 5, 10 µm | 2.0-8.0 | 7%(120Å) | 320(120Å) | N/A |
| Blossmate Polar-Propylamide | 5 µm | 2.0-8.0 | 7%(120Å) | 300(120Å) | N/A |
| L80: Cellulose tris(4-methylbenzoate)-coated, porous, spherical, silicaprarticles, 5 µm in diameter. | | | | | |
| Ultisil Cellu-J | 5, 10 µm | 2.0-9.0 | N/A(120Å) | 320(120Å) | N/A |
| L90: Amylose tris-[(S)-alpha-methylbenzylcarbamate] coated on porous, spherical silica particles, 3 to 10 µm in diameter. | | | | | |
| Ultisil Amy-S | 5, 10 µm | 2.0-9.0 | N/A(120Å) | 320(120Å) | N/A |
| L93: Cellulose tris(3,5-dimethylphenylcarbamate) reversed phase chiral stationary phase coated on 3 or 5 µm silica gel particles. | | | | | |
| Ultisil Cellu-DR | 5, 10 µm | 2.0-9.0 | N/A(120Å) | 320(120Å) | N/A |
| L96: Alkyl chain, reversed-phase bonded totally or superficially porous silica designed to retain hydrophilic and other oplar compounds when using highly aqueous mobile phases, including 100% aqueous, 1.5 µm to 10 µm in diameter. | | | | | |
| Ultisil AQ-C18 | 3, 5, 10 µm | 1.5-10.0 | 12%(120Å) | 320(120Å) | Yes |
| Ultisil LP-AQ | 5 µm | 1.0-8.0 | 5%(120Å) | 320(120Å) | No |
| L107: Cellulose tris(4-methylbenzoate)-coated porous spherical particles, 3 to 5 µm in diameter, for use with reversed phase mobile phases. | | | | | |
| Ultisil Cellu-JR | 5, 10 µm | 2.0-9.0 | N/A(120Å) | 320(120Å) | N/A |
| L114: Sulfobetaine graft-polymerized to totally or superficially porous silica, 1.5 to 10 µm in diameter, or a monolithic rod. Packing having densely bonded zwitterionic groups with 1:1 charge balance. | | | | | |
| Ultisil HILIC Amphion II | 5 µm | 2.0-8.0 | 6%(120Å) | 320(120Å) | N/A |
| L118: Aqueous polymerized C18 groups on silica particles, 1.2 to 5 µm in diameter. | | | | | |
| Ultisil PAH | 3, 5 µm | 1.5-10.0 | 22%(120Å) | 320(120Å) | No |
| Not included in USP List | | | | | |
| Ultisil MM NH ₂ /CN | 5 µm | 2.0-8.0 | N/A(120Å) | 320(120Å) | N/A |
| Ultisil MM C18/SCX | 5 µm | 2.0-8.0 | N/A(120Å) | 320(120Å) | N/A |
| Ultisil Zn | N/A | N/A | N/A(120Å) | N/A(120Å) | N/A |
| Ultisil Lead oxide | N/A | N/A | N/A(120Å) | N/A(120Å) | N/A |
| Ultisil Amy-SR | 5,10 µm | 2.0-9.0 | N/A(120Å) | 320(120Å) | N/A |
| Ultisil Amy-DR | 5,10 µm | 2.0-9.0 | N/A(120Å) | 320(120Å) | N/A |

4. Cross Reference

Ultisil XB-C18 can substitute:

| | | |
|-------------------|------------------------|---------------------|
| Symmetry C18 | Symmetry shield RP C18 | |
| Luna C18 | Luna C18(2) | Discovery C18 |
| Hypersil BDS C18 | Alltima C18 | Zorbax Eclipse C18 |
| BetaBasic C18 | Platinum EPS C18 | Betasil C18 |
| Inertsil ODS-2 | Inertsil ODS-3 | Supelcosil LC-18-DB |
| Kromasil 100A C18 | HyPURITY C18 | |

Ultisil AQ-C18 can substitute:

| | | |
|-------------------------|------------------|------------------|
| Aquasil C18 | Atlantis C18 | Zorbax SB-AQ C18 |
| Synergi Hydro-RP C18 | HydroBond AQ C18 | HydroBond PS C18 |
| Ultra Aqueous C18 | Prontosil C18 AQ | YMC-Pack ODS-AQ |
| Elite Sino Chrom ODS-BP | | |

Ultisil XB-C8 can substitute:

| | | |
|-----------------------|---------------------|-----------------|
| Symmetry C8 | Luna C8 | Luna C8(2) |
| Discovery C8 | Hypersil BDS C8 | Alltima C8 |
| Zorbax Eclipse XDB C8 | BetaBasic C8 | Platinum EPS C8 |
| Betasil C8 | Inertsil C8 | Inertsil C8-3 |
| Supercosil LC-8-DB | Kromasil 100A C8 | HyPURITY C8 |
| YMC-Pack C8-AM | Adsorbosphere HS C8 | Develosil C8 |
| Cosmosil C8-MS | Nucleosil 100 C8 HD | |

Other Ultisil Columns: XB-CN, XB-Phenyl, XB-CN, SiO₂ and Polar RP can replace the most of the same type columns of other brands.

Xtimate (wide pH range) can substitute:

| | | |
|------------|---------------|----------------|
| Waters | Xterra series | Xbridge series |
| Agilent | Extend series | |
| Phenomenex | Gemini series | |
